

GRAVITY
A Space Suspense in
3D

Written by
Alfonso Cuarón & Jonás Cuarón

BLACK.

SILENCE.

CARD 1

AT 600 KM ABOVE PLANET EARTH THE
TEMPERATURE FLUCTUATES BETWEEN 120 AND
-100 DEGREES CELSIUS.

SILENCE.

CARD 2

THERE IS NOTHING TO CARRY SOUND, NO
OXYGEN, AND NO AIR PRESSURE.

SILENCE.

CARD 3

LIFE HERE IS IMPOSSIBLE.

SILENCE.

TITLE-

GRAVITY

BLACK-

OUTER SPACE, 600 KILOMETERS ABOVE-

PLANET EARTH.

Like all images of Earth seen from space, this image of our planet is mythical and majestic.

The globe seems almost tangible, slowly spinning, floating in the endless void of space. It is a blue planet, and bright white clouds twirl and stretch in capricious patterns across the deep blue of the oceans and the jigsaw of continents: green, yellow and brown.

It is noon in Cape Town and early night in India.

The sphere is almost a perfect orb except for the darkened sliver on its Eastern edge.

It is beautiful! And so full of life.

But not here.

Here it is completely silent.

SILENCE-

IN THE DISTANCE-

A small metal object crosses the empty space surrounding Earth. If it appears to be a small satellite that is only because it is far away from us. It is the size of one football field. It is-

The INTERNATIONAL SPACE STATION (ISS).

It resembles a dragonfly. Its solar panels stretch out, like wings, from the long body made of connected pressurized modules.

It floats with a sense of proud achievement.

It orbits at an altitude of 500 km above sea level. It moves at an average of 27,700 kilometers per hour, completing 15.7 laps around the Earth per day.

It is cruising over Zimbabwe. To the East, the island of Madagascar. Up to the North, the expansive dry lands of Somalia and Ethiopia.

Soon, the ISS curves around the spherical planet, and it becomes smaller, almost indistinguishable, no more than a small bright spec grazing over the blue atmosphere.

CLOSER TO US-

Orbiting at an altitude of 600 km-

The EXPLORER SPACE SHUTTLE becomes visible.

This icon of space exploration has played a key role in all of NASA's missions since the late 90's.

Faintly we hear static, voices murmuring over radio frequencies. As the babble bulds we might hear one conversation amongst the rest:

MISSION CONTROL

(On radio, faint)

Explorer, please verify that the P1
ATA removal on replacement cap part 1
and 2 are complete.

EXPLORER CAP
(On radio, faint)
DMA M1, M2, M3 and M4 are complete.

MISSION CONTROL
(On radio, faint)
Copy that Explorer. Dr Stone-Houston,
requesting status update...

A fizz of static and then the voice continues with sudden,
starling clarity.

RYAN
Installation ninety-five percent
complete. Running level one
diagnostics on circuits, sensors, and
power. Standby.

MISSION CONTROL
(On radio)
Standing by. Looks like we're on
schedule. Dr. Stone, Medical is
concerned about your ECG readings.

RYAN
I'm fine Houston.

MISSION CONTROL
(radio)
Well, medical doesn't agree doctor.
Are you feeling nauseous?

RYAN
Not any more than usual, Houston.
Diagnostics are green. Linking to
communications card. Ready for data
reception. If this works, when we
touch down tomorrow, I'm buying all
you guys a round of drinks.

MISSION CONTROL
(radio)
That's a date, doctor. Just remember,
Houston is partial to Margaritas.

RYAN
OK, here we go... Booting comm card
now. Please confirm link.
(beat)
Houston, please confirm reception of
data.

MISSION CONTROL
(on radio)
Negative. We're not seeing any data.

RYAN
Stand by, Houston. I'm gonna reboot
the comm card.

MISSION CONTROL
(radio)
Standing by.

An ASTRONAUT - MATT KOWALSKI - floats thirty meters away from
the Shuttle wearing a bulky white space suit and a full, bubble-
like helmet.

ASTRONAUT
Houston, I have a bad feeling about
this mission.

MISSION CONTROL
Please expand.

MATT
Okay, let me tell you a story. It was
'96. I'd been up here 42 days. Every
time I passed over Texas, I'd look
down, knowing the second Mrs Kowalsky,
was looking up, thinking of me. Six
weeks I'm blowing kisses to that
woman. Then we land at Edwards and I
find out she'd run off with a lawyer
before I was off the launch pad, so I
packed my car and I headed to...

MISSION CONTROL
Tijuana. You've told this story,
Kowalsky. As Houston recalls, she
took off in your '74 GTO. Engineering
requests fuel status on the jet pack
prototype.

Matt smiles, checks the monitors of the sleek device strapped to
his back.

MATT
Five hours off the reservation and I
show 30% drain. My compliments to
Engineering. Except for a slight
malfunction on the nulling of the roll
axis, this jetpack is one prime piece
of thrust.

MISSION CONTROL
(on radio)
Engineering says thank you.

MATT
Tell them I still prefer my '67
Corvette though. Speaking of which did
I ever tell you the--

MISSION CONTROL
(on radio)
We know the Corvette story, Matt.

MATT
Even Engineering?

MISSION CONTROL
Especially engineering. We're going
to miss you, Matt.

Matt grins, fiddles with a control and propels himself away from the Shuttle.

Stationed around the telescope are TWO ASTRONAUTS carrying out a repair mission. They are also wearing space suits but unlike Matt, they are not wearing Manned Maneuvering Units. SAFETY TETHERS are the only things stopping them from floating away into space.

RYAN
Comm card reboot in progress.

MISSION CONTROL
(on radio)
Thank you doctor. Shariff, what's your
status?

SHARIFF
Nearly there. Replacing battery module
A1 and C.

SHARIFF DASARI is an Indian engineer in his mid-thirties. He is attached with tethers to a platform on one side of the Hubble. This is his second mission into outer space.

MISSION CONTROL
(on radio)
Could you be more specific?
Indeterminate estimates make Houston
anxious.

SHARIFF

No... no... no Houston, don't be anxious. Anxiety is not good for the heart... The system is ready to re-activate.

MISSION CONTROL

(on radio)

Hubble Telescope engaged. Upgrade fully functional. That applause you hear is for you, Shariff. Congratulations. Kick back, take the rest of the day off.

Shariff cheers and begins singing a pop tune in Hindi, bursting into a Zero-G Bollywood choreography that is repressed by the stiffness of his space suit.

SHARIFF

(singing)

Woohoo... Jaise Baadal Paani Ka, Yaarana
Hai Oh Jaise Paani Ka, Yaarana Hai.

MISSION CONTROL

(on radio)

Matt, please advise as to Mission Specialist Shariff's current activity.

MATT

He appears to be doing the *Macarena* of some sort. Though that would merely be a best guess scenario on my part.

Matt is now approaching the Explorer, skillfully maneuvering his thrusters.

The other astronaut stands perched on a ROBOTIC ARM attached to the Shuttle. The arm is a crane-like moving platform remotely operated from inside the Shuttle.

We TRACK In on the astronaut as she works intently alone.

MISSION CONTROL

Dr. Stone. Houston. Medical now have you with a temperature drop to 35.9 and heart rate rise to 70. How are you doing?

RYAN

Houston, I'm fine, it's just...

(she swallows)

...Keeping your lunch down in zero G is harder than it looks.

MISSION CONTROL
Doctor Stone? Medical is asking if you
want to return to Explorer?

Ryan HUMS as she jiggles the CARD.

RYAN
No, we've been here for a week
Houston, let's just finish this.

RYAN STONE is a medical engineer, specialized in hospital
scanning systems. She's focused on her work as though she's all
alone in the world. This is her first mission.

Ryan eyes the Card, then...

RYAN (CONT'D (CONT'D)
Card is up.

MISSION CONTROL
(on radio)
That's a negative. I'm afraid we're
getting nothing on this end, doctor.

Ryan eyes the Card, then...

RYAN
Try again.

MISSION CONTROL
(a beat, then...)
Still nothing.

RYAN
Houston, could you please turn that
music off?

MISSION CONTROL
(on radio)
Kowalsky?

MATT
Not a problem.

Matt toggles a switch and the music stops.

RYAN
Thank you, Kowalsky.

Ryan moves the Card around.

RYAN (CONT'D)
Now, Houston?

MISSION CONTROL

Negative.

RYAN

Could Houston be misinterpreting the data--?

MISSION CONTROL

(on radio)

We're not receiving any data. Engineering is recommending a vis-check for component damage.

Again, as if to herself-

RYAN

Mmmm. Let me see what's going on.

She starts to disengage one of the panels.

RYAN (CONT'D)

(mumbles)

What have you got here?

Ryan takes out a card from under the plate and begins to examine it. Matt begins to approach her.

RYAN (CONT'D)

Visual examination doesn't reveal any damaged components. The problem must be originating in the comms panel.

MISSION CONTROL

(on radio)

That seems to be the case. Engineering admits that you warned us that this could happen. That's as close to an apology as you're going to get from them. We should've listened to you doc.

Without losing any time, Ryan puts the card back into the telescope-

RYAN

I'm on it.

MISSION CONTROL

(on radio)

Copy that. How long do you think it'll take you?

Matt begins a wide loop around the telescope.

RYAN

An hour.

MISSION CONTROL

(on radio)

Outstanding. We appreciate your patience, Doctor. Installing your system in the Hubble is the main purpose of this mission.

Ryan doesn't respond, continuing to work. Matt closes in as he circles the telescope.

MISSION CONTROL (CONT'D)

Houston trusts Mission Commander Kowalsky realizes that this delay is not of sufficient duration to enable him to surpass Anatoly's Solovyev's spacewalking record, as most recent calculations indicate that he will be left...

MATT

Seventy-five minutes shy. Never crossed my mind.

MISSION CONTROL

(on radio)

Matt, It's been a privilege.

Matt hesitates ever-so-briefly, then...

MATT

Right back atcha, Houston.

MISSION CONTROL

(on radio)

Enjoy your last walk...

MATT

Am I a go to assist Dr. Stone in removing the panel?

RYAN

Assistance appreciated.

MISSION CONTROL

(on radio)

Permission granted.

MATT
Thank you, Houston.
(to Ryan)
Mind if I join the fun?

RYAN
Certainly.

Ryan begins unbolting. Matt lands right next to Ryan and grabs onto the telescope. She is frustrated, determined.

MATT
How are you feeling?

RYAN
Like a Chihuahua that's being tumble
dried.

Matt takes out his pistol grip, and with fast precision puts its head to a bolt and begins unscrewing. Matt removes the bolt with confidence.

MATT
It's been a rough week. If it makes
you feel any better, I puked up
everything but my kidneys on my first
ride.

Ryan is not as precise with her pistol grip, and when a bolt comes off-

She DROPS IT.

RYAN
Whoa...! AWOL!

The bolt spins floating away. She tries to grab it but MISSES, barely touching it but brushing it just enough to give it a push that makes it change direction....

She turns and reaches out to grab it, but she is strapped to the Robotic Arm.

The bolt spins out into the emptiness of space when-

A hand GRABS it before it has gone too far. It is Matt's.

Ryan looks at him, embarrassed.

RYAN (CONT'D)
Thanks. Sorry. In my basement lab
things usually fall to the floor.

Matt puts the bolt away. He begins to unscrew another bolt.

MATT

Hey -- you're the genius up here. I just drive this bus.

RYAN

Call me a genius if I can get this board initialized in the next hour.

MISSION CONTROL

Explorer, this is Houston.

EXPLORER CAP

Go ahead Houston.

MISSION CONTROL

NORAD reports a satellite has incurred a missile strike. The impact has created a cloud of debris orbiting at 20,000 miles per hour. Current debris orbit does not overlap with your trajectory. We'll keep you posted on any developments.

Ryan glances at Matt.

RYAN

Should we be worried?

MATT

Let the boys down there worry for us.

RYAN

Explorer, engage arm and pivot to cargo bay.

EXPLORER CAP

(on radio)

Standby for arm maneuver.

The robotic arm moves very slowly, pulling Ryan along while Matt begins to unharness from the telescope to shift his position.

MATT

So doc, now that you work for NASA, how do you like it?

SHARIFF

Kinda like winning the lottery, isn't it?

She grins at the memory, glances at him. Confesses:

RYAN

I was just happy that they didn't cut the funding to my research.

MATT

How long was your training?

RYAN

Six months.

SHARIFF

Including holidays?

MATT

So, what is this scanning system?

SHARIFF

Nothing rad, it's just a new set of eyes to scan the universe.

RYAN

Assuming it works, it's just for hospital use. This one is a prototype.

EXPLORER CAP

Standby for marking.

MATT

Listen, they don't bankroll prototypes, even for your pretty blue eyes.

She gives him a look.

RYAN

My eyes are brown.

Matt stares at her, a faint smile on his face.

MATT

Right now your eyes are blood shut.

She grins, looks away -- he got her. Then...

SHARIFF

Kowalsky!

Matt turns. Shariff raises his arms again.

SHARIFF (CONT'D)

Is this great or what?!

Shariff JUMPS and FLOATS AWAY from the Shuttle, screaming and flapping his arms. A long SAFETY TETHER attached to his waist tenses and-

Brings Shariff to an ABRUPT STOP, snapping him back like a bungee cord.

MATT
(for Ryan's benefit)
And to think he went to Harvard.

Ryan doesn't react to this, too consumed as she is with the panel. Matt looks out. A sad smile is on his face.

MATT (CONT'D)
You gotta admit one thing. You can't
beat the view....

MATT ENJOYS THE VIEW

THE EARTH, with its ever-changing surface of blues and whites, greens and browns, is massive and serene below him.

RYAN
Mm-hm.

MATT
"Mmm?" So what do you like about being
up here?

She hesitates -- trying sincerely to articulate her feelings as we GAZE down at the silent planet below.

RYAN
The silence.
(beat)
I could get used to it.

Matt laughs softly.

We arrive back on him as he turns back to look at Earth. Something flickers briefly in Matt's eyes-- something complicated--

MATT
HMMMM. Terrific.

Ryan inspects a panel inside the telescope, studying it with a small mirror.

RYAN
Houston, from first inspection comms
panel appears to be dead. Am I a go
to cut link to auxiliary?

MISSION CONTROL

You're the expert, doctor. It's your call.

Ryan takes out the small mirror and Matt stretches his arm, offering assistance, but-

She does not want any help and puts the mirror away in her toolbox, leaving Matt with his arm outstretched.

Ryan starts looking for another tool, but Matt is one move ahead of her, offering her a pair of tweezers.

Ryan hesitates and takes the tool. She starts working on the panel.

MATT

Houston, I have a bad feeling about this mission.

MISSION CONTROL

Please elaborate.

MATT

It's the same feeling I had at Mardi Gras in 1987...?

He waits, letting the moment hang knowingly. Then:

MISSION CONTROL

That is affirmative. Surprisingly, control hasn't heard the Mardi Gras story. Please proceed.

MATT

Well, it's day one and I'm bumping my way down Bourbon Street looking for the sister of a friend of mine. The streets are swimming with people, I'm thinking there's no way I'm finding this girl...

Ryan rolls her eyes and mumbles to herself-

RYAN

Proceeding to over ride.

Matt continues his story without missing a beat-

MATT

Then all of a sudden I look up and -- there she is.

(MORE)

MATT (CONT'D)

I am about to yell out when I notice she's holding hands with a short hairy guy in board shorts and a Margaritaville T-shirt. Then I realize, the guy's no guy. My sister's friend is holding hands with a--

Mission Control interrupts on the radio.

MISSION CONTROL

(on radio)

ISS, this is Houston.

SPACE STATION CAP

(on radio)

Zlotze Houston.

Ryan inserts the plate into the Hubble.

MISSION CONTROL

(on radio)

Explorer, this is Houston.

EXPLORER CAP

(on radio)

Go ahead Houston.

MISSION CONTROL

(on radio)

Mission abort. Repeat: mission abort. Initiate emergency disconnect from Hubble.

All the astronauts stop what they're doing and anxiously await further instructions, except for Ryan who keeps working.

MISSION CONTROL (CONT'D)

(on radio)

Begin re-entry procedure. Start Deorbit Prep for PLS at Kennedy. ISS, initiate emergency evacuation.

Matt is immediately flung into action and rapidly unharnesses himself from the Hubble.

EXPLORER CAP

(on radio)

Copy all Houston, and in work. Matt, immediate return to Explorer. Repeat, immediate return to Explorer.

MATT

Roger. Explorer, prep airlock!

EXPLORER CAP
(on radio)
Airlock engaged--ready to receive.

Ryan is working on the panel.

MATT
Houston. Elaborate.

MISSION CONTROL
(on radio)
Debris from the impact has caused a chain reaction, hitting other satellites in its path and creating new debris. Norad reports that orbital and ballistic effects are driving the cloud of debris up toward your altitude. How copy?

MATT
Copy all Houston.
(to Ryan)
Put a bow on it Dr. Stone.

RYAN
I can't. If I turn it off now we'll lose the whole system.

She keeps on furiously tweaking.

MATT
I'm not going to ask you again.

RYAN
One second--

MATT
Not one second. Now! Shut it down!
THAT'S AN ORDER!!!

She looks up, sees Matt glaring. Looks him in the eye.

RYAN
Sorry. I'm sorry. It's done.

The ROBOTIC ARM slowly withdraws, carrying Ryan back towards the Shuttle.

Matt watches her go, then:

EXPLORER CAP
(on radio)
Kowalsky, initiate emergency
disconnect from the Hubble.

MATT
Alright Shariff, let's do this.

SHARIFF
Roger.

Shariff turns and heads toward the base of the telescope holding onto the hangar's handrails.

MATT
Houston. Update.

Matt PROPELS himself to the base of the Hubble using the propelling unit on his back.

MISSION CONTROL
We have a full on chain reaction. It's
been confirmed that it is the
unintentional side effect of the
Russians striking one of their own
satellites.

Shariff arrives to the base of the telescope.

SHARIFF
They shot down their own satellite?

MATT
Right of disposal. Most likely a spy
sat gone bad. Now it's space junk.

Matt grabs onto the base of the telescope-

MATT (CONT'D)
Explorer, ready to disengage HST.

EXPLORER CAP
(on radio)
Locks releasing in three... two...
one...

The locks attaching the Hubble to the Explorer release. Matt and Shariff give the Hubble a push away from the hangar. Pushing the huge telescope is not a difficult task in zero gravity.

MISSION CONTROL
Explorer, new data coming through.

As it floats away, Matt gives the telescope a small spin.

MATT

What's the blowback, Houston?

MISSION CONTROL

It's not good. Most of our systems are going down. Debris chain reaction is out of control and rapidly expanding. Multiple sats are now down and they keep on falling.

Matt eyes the arm as it slowly retracts, carrying Ryan back.

MATT

Define "multiple" sats.

MISSION CONTROL

Most of them. Telecommunications systems are gone. Expect a communication blackout at any moment.

RYAN

Kowalsky, visual of debris at nine o'clock.

Matt's eyes shift, watching a LARGE OBJECT, a piece of a BSE SATELLITE, spiral toward them.

MATT

Half of North America just lost their Facebook.

The sat glides by at tremendous speed.

MISSION CONTROL

You're a go for TH1138. Repeat You're a go for TH1138 procedure.

EXPLORER CAP

Copy that Houston.

MATT

Explorer, this is Kowalsky. Confirming visual contact with debris. Debris is from a BSE sat. To repeat--

SHARIFF

Heads up!

MATT

To repeat I have--

ANOTHER OBJECT, part of a WEATHER SATELLITE, hurls by them, a little bit closer than the previous one.

RYAN

Dr. Stone requesting faster, faster
transport.

It is followed by a SMALL PIECE OF DEBRIS. It zooms by faster
than the previous ones and hits the BSE SATELLITE.

The satellite EXPLODES into hundreds of pieces and-

A CHAIN REACTION takes place.

MATT

We have to go. Go, go! Go!

The DEBRIS from the BSE satellite hits the WEATHER SATELLITE,
and it EXPLODES, sending debris in all directions.

MISSION CONTROL

Attention. New data suggests immediate
evacuation absolu...

A high frequency of interference and-

THE COMMUNICATION IS LOST.

THE ARM transporting Ryan is moving very slowly.

RYAN

Dr. Stone requesting faster transport
to the bay area. Explorer get me down.

MATT

Explorer permission to retrieve Dr.
Stone.

EXPLORER CAP

(on radio)

You are a go, Kowalsky.

Matt thrusts himself over to Ryan.

EXPLORER CAP (CONT'D)

(on radio)

Houston, this is Explorer. Copy?

But there's no answer.

EXPLORER CAP (CONT'D)

(on radio)

Houston, this is Explorer. Copy?

Still no answer.

EXPLORER CAP (CONT'D)
(on radio)
We lost Houston!

Matt stops next to Ryan.

MATT
Unstrap! You can't tune out the world
up here.

She reaches for the last clip and begins to undo it.

RYAN
I'm trying...

MATT
Try releasing the safety clip.

Shariff makes his way back toward the airlock as-

A PIECE of the debris HITS the Hubble's SOLAR PANELS, making a
12-inch HOLE in its golden surface.

A piece of debris passes, nearly hitting them.

SHARIFF
Need some help there Matt?

MATT
No, don't wait for us. Get inside.

RYAN
It's stuck!

Further back, another piece of debris collides with a bigger
one. The two chunks of debris explode into a million pieces of
shrapnel, one of which-

HITS Shariff's helmet, breaking through the glass and hitting
his head like an expansive bullet.

MATT
Man down! Man down!

Matt PROPELS himself toward Shariff, who is floating away from
the Shuttle unconscious.

MATT (CONT'D)
(to Ryan)
Disengage!!!

AN IMPACT.

A piece of debris pierces through the right wing of the Space Shuttle, creating a five-foot hole.

THE SPACE SHUTTLE ROLLS.

The arm, with Ryan attached to it, rolls with the Shuttle.

MATT (CONT'D)

Explorer has been hit. Explorer do you read? Explorer, over. Explorer--

Another IMPACT.

A piece of debris HITS the robotic arm like a cannon ball and DETACHES it from the Shuttle.

The broken piece of the arm SPINS AWAY from the Explorer at a great speed with Ryan attached to it. She passes next to-

THE HUBBLE as a big piece of debris hits the telescope. The top of the cylinder explodes into more debris, which is expelled in all directions, barely missing Ryan as she spins away attached to the arm.

ON THE ARM-

Ryan's panic grows as she spins further into the nothingness of space.

MATT (CONT'D)

Astronaut off structure! Dr. Stone is off structure!

With every spin, the shuttle, being punished by debris, diminishes into a tiny dot in the distance.

MATT (CONT'D)

(on radio)

Dr. Stone, detach!

RYAN

Nooooo!

MATT

(on radio)

You must detach!

RYAN

No.

MATT

If you don't detach that arm is going to carry you too far!

RYAN
(frozen)
I can't!

MATT
(a brief beat, then)
Listen to my voice. You need to focus.
I'm losing visual of you. In a few
seconds I won't be able to track you.

RYAN
(She pulls herself together)
Ok. Ok.

MATT
You need to detach. I can't see you
anymore.

The robotic arm keeps on spinning and stars orbit wildly in her
field of vision.

RYAN
I'm trying. I'm trying.

MATT
Do it. Now!

RYAN
Ok. I'm trying! I can't it's stuck,
Hold on.

Ryan's hands are trembling and she can't get a grip on the hook.

MATT
Houston, I've lost visual of Dr.
Stone... Houston, I've lost visual of
Dr. Stone.

As Matt's VOICE is LOST to STATIC, Ryan squeezes the hook and
is...

...gone, kicking herself AWAY from the robotic arm and FLYING
FREE of the rotating arm. She catches a brief glimpse of the arm
as it helicopters away, then loses sight of it as she rotates
end over end in endless free fall.

A PRIMAL SCREAM of God forsaken fear erupts from her lungs.

The RADIO CRACKLES and Matt's VOICE returns.

MATT (CONT'D)
Dr. Stone! Do you copy?! Repeat! Do
you copy?

RYAN

Yes. Yes. I copy. I'm detached!

Ryan slowly spins, drifting into the empty darkness of space.

MATT

...Give me your position!

RYAN

I don't know. I don't know! I'm spinning. I can't. I can't.

MATT

Report your position.

Tumbling end over end, Ryan fixes her gaze on her wrist. The effort makes her nauseous. She looks away.

RYAN

GPS is...down. I can't, it's down, I can't.

MATT

Give me a visual.

Matt's faint voice is heard on the transmission under a lot of static. Ryan is panicking and begins to hyperventilate. Her eyes rake the dark sameness of her surroundings.

RYAN

I told you! Nothing. I see *nothing!*

MATT

Do you have a visual of Explorer?

RYAN

No--

MATT

Do you have a visual of ISS?

RYAN

No--

As Matt's signal grows fainter her breathing becomes more labored.

MATT

I need you to *focus*. Give me a visual... *anything*.

Ryan's eyes flutter, then roll up into her sockets...

RYAN
It's too fast.

INSIDE THE HELMET-

Ryan swallows harshly, her throat suddenly dry.

RYAN (CONT'D)
I can't breathe. I can't...breathe...

She inhales and exhales with quick short breaths-

AHHHH... OHHHH

AHHHH... OHHHH

Ryan's eyes are wide open and desperate as her breathing accelerates.

AHH... OHH... AHH... OHH

AHH... OHH... AHH... OHH

Her limbs look fragile against the black and incalculable void.

AHH... OHH... AHH... OHH

She inhales.

AHH...

And her throat closes.

HH...

Her mouth is open, but she cannot exhale.

Not a breath.

Ryan's choking. The lack of oxygen is making her veins pop out and her lips turn blue.

Her eyes open wide, and-

She exhales.

OHH...

And begins breathing deeply.

AHHHHHH... OHHHHHH....

As her breathing steadies, she begins to focus, her eyes searching the distance.

THROUGH THE HELMET-

Ryan can see her face reflected against the visor, lit by the control panels.

She dims the light and she can see-

Her legs and arms floating against endless space as she drifts towards the empty void, broken only by lonesome stars whose position change as she rotates, giving way to-

THE EARTH,

Very still and very distant. Night is creeping across the sphere as the sun sets, a sliver of light on the Western Hemisphere.

A metallic object floating over the Earth is hit by a RAY of the sinking sun, and it gleams like a tiny star. Her eyes blink in recognition, gleaming with alertness.

Her intellect engages and she gains a new sense of calm.

RYAN (CONT'D)

Houston, this is Dr. Ryan Stone.. I'm drifting but I have a visual of Explorer.

Her eyes scan the enveloping darkness, trying to get a fix on the gleaming orb that is earth, her face alive with concentration as she makes calculations.

RYAN (CONT'D)

With North at 12 o'clock, the Shuttle is at the center of the dial.

She frowns as she tumbles backward again, recalculating.

The sun is slipping behind the Earth. She studies the rim of fire until it too slides from view.

RYAN (CONT'D)

I can see the Chinese station. No, no, no, it's the International Space Station.

The sun's glow illuminates another object in the distance, a bright spec hovering over the horizon- the INTERNATIONAL SPACE STATION.

RYAN (CONT'D)

ISS is at 6, no, 7 o'clock.

Just then, the sun's rays recede and the Station DIMS, becoming one with the darkness. Ryan blinks, mildly alarmed.

INSIDE THE HELMET-

RYAN (CONT'D)
Lieutenant Kowalsky, do you copy?

Silence.

RYAN (CONT'D)
Explorer, do you copy?

Silence.

Slowly, the sun recedes further behind the earth and the light bathing Ryan's face evaporates. As she is swallowed by the darkness, she speaks once again:

RYAN (CONT'D)
Houston, do you copy?

THE WHOLE FACE OF THE EARTH IS IN SHADOW.

And so is Ryan. Her eyes dart. It is utterly silent. She spins in the darkness, waiting.

RYAN (CONT'D)
Houston, this is Mission Specialist
Ryan Stone. I'm off structure and I'm
drifting.

There is only the silence, complete and absolute.

RYAN (CONT'D)
Do you copy?

Nothing. She watches the earth slip from view yet again.

When next she speaks, the words are as delicate as snowflakes, tripping off her tongue like a prayer...

RYAN (CONT'D)
Anybody...? Anyone...? Please copy.

A soothing light hits Ryan's face.

THE MOON is rising over the Pacific Ocean.

It's almost full and its soft cool light pours over the globe, brightening the deep blue waters and-

IN THE DISTANCE -

A LIGHT, not bigger than a star, is FLICKERING.

Ryan's eyes focus on the light. Her PUPILS DILATE. Something like tears glistens as she stares at the flickering light, afraid to blink as she watches the...

...star draw closer, smiling as the faintest thread of a radio transmission stitches its way through the silence, listening as STATIC SINGS through her helmet, stinging her ears with the sound of...

Her name.

MATT
(on radio)
... Stone. Do you copy?

RYAN
(almost to herself)
Lieutenant Kowalsky?...

The flickering star begins to thicken...

MATT
(on radio)
Repeat. *Do you copy?*

RYAN
YES! YES! I copy! I'm here!

As she watches the figure of an astronaut takes shape.

MATT
(on radio)
Flash your light.

RYAN
My light?

MATT
(on radio)
So I can see you.

RYAN
Here! Here!

Ryan opens a pouch in her suit, fishes out a FLASHLIGHT. Hands trembling she shines it toward the approaching dot.

MATT
(on radio)
There you are. Hang tight. Report your status.

RYAN
I'm... I'm alright... I'm fine.

MATT
(on radio)
Your status! Give me your readings?

RYAN
3.6 psi, I think.

MATT
Your O2. Give me your O2.

RYAN
Steady at eight percent...no seven...

MATT
(on radio)
You're breathing too fast. You're
burning oxygen. We don't want to do
that. We want to relax. Copy.

RYAN
Copy.

MATT
Nearly there.

RYAN
Please hurry.

Ryan can see Matt quickly growing in size. She continues to
FLASH HER LIGHT.

MATT
(on radio)
You can holster that torch, Dr. Stone.

RYAN
Oh. Sorry.

She slips the light back into her side pouch just as Matt
appears as if from nowhere and GRABS HER.

MATT
Gotcha.

RYAN
Arghh!

Ryan holds on to Matt. Instantly, they begin to spin together.
Matt takes out a tether.

MATT
Now, I'm going to tether you to me.

Ryan is paralyzed, holding onto Matt tightly and looking at him in fright. He stares back.

MATT (CONT'D)

I know. You never realized how devastatingly good-looking I am.

Matt grins.

MATT (CONT'D)

But I need you to stop staring and help me with the tether. Okay?

RYAN

Okay. Okay. Okay. Okay, Ohh I got it.

He runs the other end of the tether to the harness on Ryan's suit and attaches it.

MATT

Ok. So far so good. Now listen. I'm going to give you a little push, just so you're clear of the jets--

RYAN

No--

MATT

Sorry. Not a push, more like a nudge.

RYAN

No... No... No... Wait... Don't.

Matt places his hand on her breastplate and gives her a gentle nudge. Drifting again she begins to freak.

RYAN (CONT'D)

Noooooo!!!! Dammit!!!

The tether tenses and she stops nine feet away from Matt.

Matt ignites the thrusters, tugging Ryan behind him. But this proves a difficult endeavor as her momentum drags him, changing his direction.

MATT

See? Where you go, I go.

Matt ignites a new thrust to re-direct his position. As he does so Ryan's change of momentum makes him swing again.

MATT (CONT'D)

Better. Let's get out of here.

Using his thrusters, Matt negotiates a new position and, igniting a long thrust, he jets away.

Ryan cannot repress the anger boiling up, and SHE SCREAMS-

RYAN
Ahh Dammit!

MATT
I know what you mean.

RYAN
Ahhh Dammit.

MATT
You're burning oxygen, we're going to go back to the shuttle. How's that for a plan. Copy?

RYAN
Fuck

MATT
Right copy that.

As Matt accelerates toward a lower orbit, his momentum takes over, steadying Ryan's swing.

MATT (CONT'D) (CONT'D)
Houston in the blind, this is Kowalsky. Dr Stone and I are making our way to base, please prepare Airlock for arrival. Copy?

They descend, gliding through pieces of debris. Among the space junk, a Solar Panel from the Hubble is distinguished.

Matt eyes a small dot in the distance: the Shuttle.

MATT (CONT'D)
Houston this is Kowalsky. How do you copy?

RYAN
Why aren't they answering?

MATT
It seems like communications are lost.

RYAN
Can they hear us on an alternate frequency?

MATT

We don't know. That's why we keep talking. If someone is listening they might just save your life. Set your watch for ninety minutes.

Matt reaches for a digital watch strapped to his wrist and sets up the timer for- 90 MINUTES.

RYAN

Why ninety?

MATT

Houston clocked that debris at fifty thousand miles per hour. Factoring in our current orbit, I reckon we've got 90 minutes before we play duck and cover again.

Ryan sets her watch, studies the counter as it begins to count down.

RYAN

02 down to six percent.

As they travel, the Shuttle begins to take form.

MATT

Okay. Pretty scary shit being untethered up here, isn't it?

RYAN

Yeah. Pretty scary shit.

MATT

(after a beat)
You did all right.

Silence.

MATT (CONT'D)

(to the Shuttle)

Houston, in the blind. This is Kowalsky. Our current location is approximately 900 meters out from the Explorer. Dr. Stone and I would like to retrieve the body of Mission Specialist Shariff and return it to Shuttle. Am I a go to retrieve?

Silence.

MATT (CONT'D)

Roger that.

Matt changes direction and approaches Shariff. He has to ignite several small thrusts to try and steady his direction, fighting against Ryan's momentum.

RYAN

Where is he? Where is he?

Shariff's body is tethered to a PANEL that was ripped away from the Explorer. Matt approaches the panel and ignites the thrusters to slow down his course, and-

He grabs onto it. Ryan, continuing her momentum, crashes against Shariff's body. The contact slows her trajectory, but it throws Shariff away, his tether tensing, pulling the panel with him.

RYAN (CONT'D)

Oh, my God. Oh, my God.

Matt, holding on to the metal, spins with it. He detaches Shariff's tether from the panel and attaches it to himself.

He lets the panel go and immediately ignites his thruster, pulling the two tethers behind him which, as they tense, bring Ryan and Shariff closer together.

MATT

Grab him!

RYAN

I'm trying. I'm trying.

MATT

Quick. You're pulling me away.

RYAN

I got him. I got him.

Matt tries to ignite a very long thrust in the direction of the Shuttle, but this is difficult as the momentum of the other two bodies pulls him in all directions.

MATT

Clutch him like he's your Valentine. I can't gauge my thrust with you two yo-yoing around.

Tentatively Ryan extends her right hand to grab onto Shariff's body harness. And she sees-

Shariff's broken helmet. A hole the size of a soft ball pierces through it and has left a tunnel of frozen dried bloody mess.

Ryan's face is inscrutable. Finally she looks away, but this time something arrests her gaze:

A LAMINATED PHOTOGRAPH floats next to Shariff, tethered to his suit via a small chain. In it, a YOUNG BOY LAUGHS with abandon, happy in the embrace of a man unseen save for his TWO STRONG ARMS. Transfixed, Ryan is unable to look away, something complicated confusing her eyes.

The photograph floats in the empty space above Planet Earth.

OUTER SPACE.

As they approach, the damage to the Shuttle becomes apparent. Explorer has been badly hit.

MATT
(under his breath)
Jesus...

The Shuttle has suffered devastating damage. The tail is beyond repair, one wing is completely destroyed, while the other waffles weakly, nearly sheared from the fuselage.

MATT (CONT'D)
(grimly)
Here's hoping you've got one monster insurance policy, Houston. Damages to Explorer are... it's totaled. Will commence search for survivors.

RYAN
02 down to five percent.

Matt thrusts to slow down his trajectory and slowly bumps against the windshield of the COCKPIT.

At the mercy of Matt's momentum, Ryan hits hard against the nose of the Shuttle, losing her grip on Shariff.

As she caroms off, she grabs onto what is left of the cockpit's window.

MATT
All right, here we go. Careful of the edges.

Matt takes his flashlight and looks through the broken windows, lighting the cockpit.

Ryan pulls herself up and looks-

THROUGH THE WINDOW-

The cabin has been destroyed. A disarray of objects, smashed and devastated.

At the end of the cabin, among the floating objects, a lifeless body drifts among the wreckage. Ryan regards it silently, mesmerized.

BANG.

The face of a second astronaut appears right in front of Ryan and crashes against her visor.

The eyes are frozen, unblinking. Ryan GASPS, wheeling backward and away.

Matt clicks Shariff's harness onto the Shuttle.

MATT (CONT'D)

Houston, in the blind. To confirm. Mission Specialist Dr. Stone and myself, Mission Commander Matthew Kowalsky, are the sole survivors of STS-157.

Matt turns to Ryan, who is staring at the dead astronauts inside.

RYAN

I apologize for not complying. I should've stopped working as soon as you instructed me to.

MATT

We were going to be hit no matter what. There was nothing you could've done to change that.

He begins to reach out, hesitates briefly, then lightly touches her shoulder.

MATT (CONT'D)

Hey.

RYAN

Yes?

She turns, no elbows this time.

MATT

Alright... We have to get ourselves to the Space Station. There.

Matt gestures vaguely to a bright dot in distance.

MATT (CONT'D)
It's a bit of a hike, but it's our
only...
(catching himself)
It's our best option. Agreed?

She stares at the dot.

MATT (CONT'D)
Dr. Stone...
(as she turns)
Agreed?

She studies his face and then, finally, nods.

RYAN
Agreed.

MATT
Alright. After you.

He gently pushes her into space. She slowly drifts away from the Explorer but is suddenly stopped by the safety tether.

Matt ignites his propellers and, giving a couple of small thrusts, he combats Ryan's swing. And with a LONGER THRUST-

He shoots forward, pulling Ryan behind him.

The two astronauts push forward together, leaving behind the shell of the Shuttle and the remains of the Hubble.

MATT (CONT'D)
Houston in the blind, this is
Kowalsky. Dr. Stone and I have
determined to proceed to ISS and use
one of their Soyuz for re-entry. ISS
if copy, please send rescue mission.
Repeat please dispatch rescue mission.

They are heading toward a small point in the distance, the Space Station, which is in a lower orbit.

OUTER SPACE. 550 KM ABOVE EARTH.

We see the two astronauts crossing the distance - a thrust, and they coast ahead, and then another thrust. Matt pulls Ryan behind him.

Two specks glide across the dark sky as a sliver of light grows on the darkened hemisphere.

THE SUN IS RISING.

WATCHING THE SUNRISE

THE SUN looks brighter and clearer than ever outside of Earth's atmosphere. The oceans and the continents brighten as its light spills over the Earth beneath them.

Warm rays of sun caress the two astronauts as they propel themselves across the empty expanse.

RYAN
02 down to two percent.

MATT
We're getting there.

MATT (CONT'D)
Beautiful, don't you think?

RYAN
What?

MATT
The sunrise. That's what I'm going to miss the most.

But Ryan is not into the view right now. She's stricken with fear. Her jaw is clenched and her eyes are almost closed.

Matt looks at the dark emptiness that engulfs him and smiles.

MATT (CONT'D)
So, where's home, Dr. Stone?

Ryan keeps her eyes closed, doesn't answer. Matt, trying to distract her-

MATT (CONT'D)
Ryan. Where's home?

Ryan opens her eyes, but still she doesn't dare to look out of the helmet.

RYAN
Home?

MATT
Ah ha. Down there. Mother Earth. Where do you pitch your tent?

RYAN
Lake Zurich.

MATT
Where the hell is that?

RYAN

Illinois.

MATT

Illinois. Central time zone. That makes it roughly... 8pm right now. What are the good people of Lake Zurich doing at 8 o'clock in the evening?

Ryan tries to overcome her fear and looks out. She frowns, terrified by the sight, and hides her face once more inside the helmet.

RYAN

I don't know...

MATT

What would you be doing?

She tries again. This time she forces herself and stares out at the Earth, which is over 500 kilometers below her.

MATT (CONT'D)

Come on. It's 8 o'clock. You've just clocked out of the hospital after putting in your customary 18-hour shift. You're driving home...

Ryan's wide open eyes are transfixed on Earth, like a deer in headlights.

RYAN

The radio. I listen to the radio...

MATT

There we go. Let me guess. NPR? Classical. Top for--

RYAN

Anything. Doesn't matter. As long as they don't talk. I just drive...

Her glassy eyes reveal a strong emotion growing inside of her, taking over her body. It is not fear, it is something deeper and more painful.

Matt studies her curiously.

MATT

What do you miss down there?

Ryan looks at the Earth. It never felt so far away.

A long silence without an answer.

MATT (CONT'D)

Is there a *Mr.* Stone?

She frowns, unable to comprehend this initially, as if it were a particularly complicated bit of math, then shakes her head.

RYAN

No...

MATT

Nobody special? Someone down there,
looking up, thinking of you?

Ryan closes her eyes. She remains silent. A silence that can't hide an unspeakable pain.

RYAN

I had a daughter.

Her eyes flutter, then open. She is frozen in this moment, as if stunned.

Her gaze shifts and finds-

Matt, studying her in his MIRROR.

MATT

What was her name?

RYAN

Sarah... She was four. Stupidest thing-
a school trip to the swimming pool.
She was playing tag- she slipped, hit
her head, and that was it... She loved
tag. I'm sure she was laughing.

She looks away, toward Earth. It looks small. Remote.

RYAN (CONT'D)

When I received the call I was driving
and ever since that's what I do. I
wake up, I go to work and then I just
drive.

Matt finally averts his eyes. He rolls his wrist over, consults the timer, watching the numbers slowly count down.

RYAN (CONT'D)

02 down to one percent.

MATT

Well, well, what d'you know. I have good news and bad news.

RYAN

Uhuh?

MATT

The good news is we're five minutes from the ISS and I know where the Russians stash their vodka... and that's a good thing cus I'm running out of fumes. Bad news is I'm gonna be ten minutes short of.....breaking Anatoly's record.

SUDDENLY, COMING FROM INSIDE RYAN'S HELMET-

BEEP. BEEP. BEEP.

RYAN

Mmm...Mmmm.

MATT

What?

RYAN

I'm red lining... My O2 tank pressure is low...

MATT

The tank may be empty but there's still oxygen in your suit, so sip, Ryan. Don't gulp. It's wine, not beer. Sip. We'll get you there.

She nods.

MATT (CONT'D)

Let's go.

Matt gives Ryan a gentle push, waiting until the tether goes taut, and-

He gives a SMALL THRUST to position himself in the right direction.

He holds this SINGLE THRUST for longer than all of the previous ones, immediately gaining speed, descending towards-

THE SPACE STATION-

Which is half a mile away, and now all of its modules are clearly visible. It also becomes clear that-

IT WAS HIT BY THE DEBRIS.

MATT (CONT'D)

Houston in the blind we have visual of the ISS. Station must have been evacuated because first Soyuz is missing. Second Soyuz exhibits surface damage and chute has deployed. It's use as escape pod for re-entry to Earth is impossible.

The surface of a module is badly scratched and some solar panels have been ripped.

THE SECOND SOYUZ becomes visible, attached to the Station's Docking Module. A piece of red and white fabric floats around the spherical capsule.

Ryan's losing her breath.

RYAN

Shouldn't we be turning? We're drifting again--

MATT

Sip, Ryan. Sip. Drifting is good. We want to drift. I wasn't kidding about those fumes. This can has one or two good thrusts left. If we're lucky....

They approach the Space Station, which is just ahead of them and a hundred meters below.

She's sweating and starts to hyperventilate.

MATT (CONT'D)

Steady...

She looks down, eyes the Station passing beneath them.

MATT (CONT'D)

Ready... aim...

It looks as though the Station is going to slip away altogether.

MATT (CONT'D)

...fire.

Matt triggers his THRUSTER, turning sharply. Ryan's trajectory carries her in a straight line, until the tether tenses, breaking Matt's direction.

He fires again to counter her momentum.

A VERY LONG THRUST sends both of them in the right direction, straight down toward the Station, but at great speed.

The Station is getting very close, and they're going very fast.

Matt ignites the FRONTAL THRUSTER, which begins to slow him down, but the thrust stops.

Ryan, following her own momentum, begins to pass Matt.

RYAN

Break... You have to break.

MATT

I can't. Can's empty. We're coming in fast and we're going to hit hard. Grab onto anything you can and hold tight!

Just then Ryan CRASHES against the SOLAR PANEL, but is unable to grab hold. As she tumbles past, the body of the Station looms.

Matt misses the solar panels, and COLLIDES against the Station. As he begins to drift past, he reaches out and snares a railing.

Ryan passes flying above him. The tether tenses, pulling Matt. The momentum is too great and he LETS GO of the railing.

Ryan floats over the roof of the Space Station, trying to grab hold of the handles and rods that stick out of the modules, but she's floating too high.

She's quickly reaching the end of the Station, there is only one handle left ahead, her last chance before floating away into the black void.

She extends her arm and GRABS the handle tightly for dear life and-

SHE STOPS.

She's holding onto the handle.

RYAN

I got it. I got it.

INSIDE THE HELMET-

She looks up and sees-

Matt is floating straight toward her and-

He COLLIDES against her. For a moment they are face to face, only the glass of their headgear separates their faces.

But she loses her grip on the handle and the impact projects her into the emptiness.

Her drifting is intercepted by a Solar Panel. She crashes against it, shattering it, as Matt rolls above it.

Ryan bounces down towards the Earth, tensing the tether, pulling Matt, making him descend over the other side of the panel.

The sharp edges of the broken panels cut the tether in two.

RYAN (CONT'D)

The tether broke. I'm detached. I'm
I'm detached.

MATT

Grab a hold. Grab anything.

Ryan is drifting away from the Station. She sees the infinite black void ahead of her and-

HER FOOT GETS STUCK IN THE PARACHUTE.

It becomes tangled in the strings and fabric, slowing her down.

Ryan is panting, her face covered in sweat. She turns back and sees-

Matt rolling, drifting in her direction.

She stretches out her arm.

Matt's arm is also outstretched.

MATT (CONT'D)

(An edge)

Give me... give me five here, Ryan.

He's trying to make light of it, but he's really struggling to reach her.

Ryan stretches farther.

Matt's hand comes closer to hers.

The tips of their fingers are almost touching.

RYAN

I've got you. I've got you--

The very tips of their fingers touch --

BUT THEY MISS.

As Matt drifts past.

MATT
Shit... shit...

RYAN
No. No. No. Don't you. No. Don't you.
Don't. Don't. NO

As the parachute tenses, she STOPS.

The tether attached to Matt's suit passes two feet away from her and-

Ryan grabs the tether. It slides through her closed fist, until-
Her grip tightens and the tether STOPS.

RYAN (CONT'D)
Gotcha!

Matt's momentum is now pulling Ryan, dragging her loose from the parachute.

MATT
You have to let me go.

RYAN
What? No--

MATT
You have to.

RYAN
No!

MATT
Those ropes are too loose,
I'm pulling you with me. You have to
let me go or we both die--

RYAN
I'm not letting you go! We're fine.

Her leg slides through the loose rope and she floats further out, being snagged at the last minute by a tether around her foot. (We move from high-angle to low angle two shot). As this happens:

MATT
Ryan!

RYAN
You're not going anywhere, you're not
going anywhere--

MATT
It's not up to you.

Matt begins to unharness the tether.

RYAN
Please don't do this.

Matt has unhooked the tether and is holding it in his hand.

RYAN (CONT'D)
Please don't do this. Please don't do
this.

MATT
You're going to make it Ryan.

RYAN (O.S.)
No!

He opens his hand, letting go of the tether, and BEGINS TO FLOAT
AWAY.

Relieved of Matt's pull, the parachute begins to retrieve,
pulling Ryan closer to the Station.

RYAN (CONT'D)
I had you! I had you.

Matt drifts away from the Station into the empty space.

Ryan bumps against the station, pulled by the parachute, and she
twists and turns before finally grabbing hold of a rail.

MATT
(on radio)
Ryan do you copy? Do you copy?

An ALARM GOES OFF.

RYAN
My CO2 alarm went off. My CO2 alarm
went off.

MATT
You need to board the station. Can you
see the airlock?

She turns, looking for the Station's Airlock.

MAT
Do you copy?

(P.O.V shot - beginning to blur)

RYAN
Yes. Yes. I see it. I see it.

MATT
(on radio)
Good. That's where you want to go.
You're losing focus, right?

RYAN
Yes.

MATT
That's because you're breathing CO2
and you're losing consciousness. You
need to board the Station.

Her eyes flutter...

MATT (CONT'D)
(on radio)
Move!

Ryan blinks, TURNS OFF the ALARM, and begins climbing over a
module of the Station.

RYAN
Ok.

The transmission becomes weaker, filled with STATIC.

MATT
(on radio)
Now listen to me. That second Soyuz is
too damaged for re-entry,
but it's perfectly fine for a little
Sunday drive.

RYAN
Sunday drive...?

MATT
(on radio)
Look to the west... You see that dot
in the distance? That is the Chinese
Station. You're going to take the
Soyuz and cruise over there. The
Chinese lifeboat is a Shenzou.

RYAN
I've never flown a Shenzhou--

MATT
(on radio)
That doesn't matter. Its re-entry
protocol is identical to the Soyuz's--

She nods, already looking.

RYAN
Ok.

MATT
(on radio)
You've never flown a Soyuz either.

RYAN
Only on a simulator.

MATT
(on radio)
So then you know.

RYAN
I crashed it. I--

MATT
(on radio)
It's a Simulator. That's what it's
designed for.

RYAN
Every time. I crashed the Simulator
every time.

MATT
(on radio)
It's not rocket science. Just point
the damn thing at earth and
by this time tomorrow you'll be back
in Lake Zurich with one hell of a
story to tell. You copy? Ryan. You
copy?

RYAN
I'm going to take the Soyuz and come
get you.

MATT
No you're not. . I have too much of a
head start. That ship already sailed.

RYAN
No. I'm coming to get you.

MATT
Ryan, you're going to have to learn to let go.

RYAN
But... I...

MATT
(on radio)
I want to hear you say you're going to make it.

Ryan is struggling for breath.

MATT (CONT'D)
(on radio)
Ryan! Say it!

RYAN
I'm... I'm going to make it.

MATT
Alright. Keep going

Ryan stares at Matt's tiny figure in the distance.

MATT (CONT'D)
What kind of name is Ryan for a girl?

RYAN
Dad wanted a boy.

MATT
Are you close to the airlock?

RYAN
Not yet.

MATT
Keep going.

Ryan continues to the Airlock.

MATT (CONT'D)
So, now that we have some distance between us- you're attracted to me, aren't you?

RYAN
What?

MATT

Well, people say I have beautiful blue eyes.

RYAN

You... you have beautiful... you have beautiful blue eyes.

MATT

I have brown eyes... that hurts.

She looks at Matt's figure receding.

MATT (CONT'D)

(on radio)

You wanna know the good news?

RYAN

What?

MATT

(on radio)

I'm going to break Anatoly's record, and I think mine's going to stand for a long, long time.

RYAN

No... I'm coming to get you.

MATT

You know, Ryan is a nice name for a girl. Wow, you should see the sun on the Ganges. It's amazing.

Ryan starts to respond, then falters, watching Matt's figure grow ever smaller.

THE SAD CROONING of HANK WILLIAMS crackles through the dying radio.

RYAN

(in a daze)

Matt...

Only static hisses...

RYAN (CONT'D)

Matt!

Static again as Matt falls deeper into the distance, becoming lost in a sea of white specks and-

The transmission ends.

SILENCE

INSIDE THE HELMET-

Ryan is dizzy, sweating, and having trouble focusing. She sees Matt-

Nothing more than a dot.

She stretches her hand toward him, as if trying to touch him with the tips of her fingers. But the dot has already vanished into never-ending darkness.

EVERYTHING IS BLURRED.

Ryan is about to lose consciousness, when-

A new ALARM GOES OFF.

She takes one deep breath as she opens her eyes widely.

If she doesn't move, she'll die.

Ryan pulls herself forward, reaching for a handle on the Soyuz. She grabs it and reaches for another, climbing her way toward the Station's airlock.

But she's losing focus.

As her right hand is reaching for a handle, everything becomes a blur, and she misses.

INSIDE THE HELMET -

Her brain is shutting down from lack of oxygen. She struggles to open her eyes and mumbles words that are unintelligible.

She reaches up again, almost blindly. Her hand grips the handle, and with one huge effort-

She sprints across the Docking Module, swinging from handle to handle, in one continual push, until she reaches the-

AIRLOCK.

She stops, takes one deep breath and-

She turns the latch and OPENS the re-entry hatch.

The hatch BLOWS OPEN as the air inside the cabin escapes into the vacuum, almost throwing Ryan back into space, but she holds tightly onto the latch.

She hangs outside, trying to gasp the last breath of oxygen inside her life system. She sees her feet dangling against the emptiness of space and-

With one last effort, she pulls herself into the airlock.

AIRLOCK MODULE. INTERNATIONAL SPACE STATION. 500 KM ABOVE EARTH.

As she enters she does a 180-degree flip. As soon as her legs are in, she grabs onto the latch, and-

CLOSES THE HATCH.

She turns the latch and-

THE CABIN IS SEALED OFF.

INSIDE THE HELMET-

Ryan is suffocating. With very little oxygen and her body intoxicated by the nitrogen in her blood, her breathing is coarse and painful.

She can hardly keep her eyes open, and she pushes herself through the cabin, an empty cylinder lit by two circular mercury lights. She reaches the-

CONTROL PANEL, a small computer with a screen that monitors the atmospheric and temperature levels inside the airlock.

She presses a button on the panel and-

THE CABIN BEGINS TO PRESSURIZE.

A low hissing sound can be heard as the tanks in the Station begin pumping pure oxygen into the airlock. The control panel's monitor shows the atmospheric levels slowly rising.

INSIDE THE HELMET-

Ryan gasps for air, but there is none.

She stares at the red-orange-green graph on the control panel showing the atmospheric levels. It reads red. Her pupils begin to dilate as-

SOUND BEGINS TO SURFACE-

In the vacuum of space there was nothing to carry sound waves, but now sound begins to travel through the oxygen that slowly fills the cabin.

The sounds are muffled, like the sounds of the outside world heard from within the womb.

A beeping sound intermittently penetrates the airlock, anxious and halting.

The Control System's graph slowly moves from red to orange. The cabin is still not fully pressurized.

But that will have to do.

With one sharp motion-

SHE TAKES OFF HER HELMET-

And pushes it from her head.

She gasps for air and coughs.

She contorts and shakes, fighting to breath in the thin atmosphere of the airlock. Her helmet bounces around the walls of the cabin, floating.

The beeping sound has become clearer and recognizable - it is an alarm ringing out across the Station.

Orange is turning to green. Her lungs begin to absorb the oxygen and her breath becomes more even. Her body floats, relaxed in the confined space of the airlock.

SHE FLOATS.

Ryan brings her hands together and removes one glove.

And then the other.

Desperately, she begins to unscrew the lock near her waist. She squirms under the suit and pushes off the upper half.

Then she throws off the lower half, squirming out of it as if shedding her old skin, desperate to free herself from the claustrophobia of the suit.

Wearing only underwear and a t-shirt, she floats in mid-air, relieved and exhausted. The hum of the Space Station surrounds her.

Then, slowly, she pulls her knees to her chest and enfolds them in her arms, floating in a fetal position.

For a moment, Ryan simply hangs in suspension, a fly in amber, surrendering to the poetry of the planets, rotating slowly in the cabin's womb.

OUTER SPACE. 500 KM ABOVE THE EARTH.

SILENCE.

The International Space Station, with its modules, its torn solar panels, and the Soyuz with its parachute billowing out from its center, is dwarfed against Earth's orb and the infinite universe stretching out beyond.

The Station looks frail and secluded, lost somewhere between the grandness of the Heavens and the Earth below.

Everything is still.

INTERNATIONAL SPACE STATION. ZVEZDA MODULE.

The module is like a wide corridor filled with cabinets, a small eating area and a small gym. A HUM reverberates across the station.

At the end of the module there is an open circular hatch leading into the-

UNITY NODE 1.

A spherical space with three hatches, each leading into different modules.

A HATCH OPENS and-

Ryan floats in. She stops at the center and holds onto a handle.

She looks in all directions and launches to her right, towards the-

ZARYA MODULE.

There are sleeping bags fastened to the walls. Clothes, shoes, a strip of three condoms -- all kinds of personal objects float in chaos around the module.

It's clear that someone left in a hurry.

Ryan passes a stationary bicycle and reaches for a metal cabinet on the wall.

She OPENS drawers, looking for something.

RYAN
Come on, come on.

She finds what she's looking for: a BAG OF WATER with a straw at one end. She unscrews the top and begins to drink from it.

She DRINKS in long gulps, squeezing the bottle, trying to quench her thirst. DROPS FLOAT out of her mouth as the water overflows. They float around her face like perfect pearls of different sizes.

She takes a pause from drinking to catch her breath. The water is cooling her down, but she still takes another long, thirsty gulp and empties the bag.

She checks the count on the STOPWATCH- 14 minutes and counting down.

She takes a new bag of water from the drawer, and pushing herself off of a wall, she dives into the-

UNITY NODE 2-

RYAN (CONT'D)
OK. Where are you? Where are you?
Comms. Comms... There you are!

Without stopping, she goes through one of the open hatches into the-

ZVEZDA MODULE.

The walls are filled with electrical equipment and wires. Without slowing down her momentum, she floats to the-

MAIN CONSOLE- A large deck which houses all of the communication and navigational systems.

On the opposite wall there is a LARGE PORTHOLE through which Earth is clearly seen.

She begins to PUSH BUTTONS.

COMPUTERS COME TO LIFE and Ryan puts on a communications headset.

STATIC CRACKLES.

RYAN
Matt. This is Ryan. Copy?

She waits.

RYAN (CONT'D)
Matt. This is Ryan. Copy?

Nothing... only static.

RYAN (CONT'D)
Matt, I made it. I'm here. I'm inside
the Station... Do you copy?

She drifts along the module, listening intently through the
headset.

RYAN (CONT'D)
Come on Matt. Talk to me.
(nothing)
Tell me where you are.
(nothing)
Give me your position...

No voices. Just static.

RYAN (CONT'D)
Where are you? Give me a visual...
tell me what you see.

Nothing.

RYAN (CONT'D)
Oh, come on. You've been yammering
nonstop since we left Cape Canaveral,
and now you decide to shut up?

She waits ONE SECOND, TWO SECONDS-

RYAN (CONT'D)
Come on Matt, talk to me!

The signal cuts in and out, but remains indecipherable. There is
something unnerving about it.

She drops her head and continues drifting toward the porthole,
listening as the STATIC SPUTTERS.

RYAN (CONT'D)
Say something... Anything.

RYAN (CONT'D)
Tell me about Mardi Gras. Tell me
about the hairy guy. What happened?

Waiting for him to respond, and in a softer voice, completely resigned-

RYAN (CONT'D)
Oh Matt. I'm not ready for this.

She bumps against the PORTHOLE, and glances out-

The Earth glimmers brightly. A third of the hemisphere is in complete darkness. Her FACE REFLECTED in the glass is SUPERIMPOSED over the EARTH.

Her eyes glisten briefly, but she fights it back. Then she pulls herself together, and begins reporting-

RYAN (CONT'D)
Houston in the blind.

The way Matt would have done it-

RYAN (CONT'D)
This is Mission Specialist Ryan Stone reporting from the ISS... All communication with Mission Commander Matthew Kowalsky has been lost. Radio transmission is absent. Visual is nonexistent.
(a beat)
To confirm, I--Ryan Stone--am the sole survivor of STS-157.

Ryan hovers by the porthole, looking hopeless.

All is silent save for the RADIO static and the hum of the Space Station.

Outside the Aurora Borealis performs its ghostly dance over the Earth's Northern Hemisphere.

SILENCE. Only the hum and the static, when-

An ALARM CHIRPS, RED LIGHTS FLICKERING across the module.

Ryan twists, swimming back to the control panel, studying a FLASHING grid of LEDS:

GRAPH OF THE STATION-

...where a blinking light indicates the Japanese Module IS ON FIRE.

RYAN (CONT'D)
What now?

And then-

The Destiny Lab begins blinking.

THE FIRE IS EXPANDING

She pushes herself toward the hatch, swimming through the few pieces of paper still hovering as she exits into the-

UNITY NODE 1.

The ALARM'S STACCATO is blasting in synchrony with the emergency lights blinking across the station.

SMOOTH BLUE FLAMES ribbon eerily across the skin of the Destiny Lab. They are spreading, expanding with a dense cloud of SMOKE.

Ryan enters and snatches a FIRE EXTINGUISHER on the wall of the module, and-

She points the nozzle at the fire and SPRAYS.

With no gravity to hold her down, the force of the spray SENDS HER FLYING BACK and-

SHE CRASHES AGAINST A WALL. The fire extinguisher bangs against her face and CUTS HER LIP.

The impact is so strong that it almost knocks her out. Her eyes fill with tears but she reacts.

There's no time to lose. She fastens her feet to a strap on the floor, and-

SPRAYS the extinguisher at the fire. But the extinguisher is no match for the fire, which has gathered in a gigantic smooth blue ball and is expanding, coming at her.

Ryan makes a fast turn and launches herself in the opposite direction into the-

UNITY NODE-

Dashing straight into the-

ZARYA MODULE-

She darts across the module, behind her-

The expanding fire ball has swallowed the Unity Node and is making its way towards her, chasing her into the-

UNITY NODE 2-

Where she makes a quick turn and darts down into the-

DOCKING MODULE-

Just in time. Above her, the flames cross the Node as they spread into the rest of the Station.

They quickly spread downward, into the Docking Module.

Ryan, the flames caressing her feet, dives through a hatch into the-

SOYUZ. AIRLOCK.

Ryan crashes against a Space Suit floating inside and turns to close the hatch.

THE FIRE is spreading outside in the module, sucking the oxygen out of the Soyuz. An incandescent blue bubble that charges at her.

Ryan, faster than fire, CLOSES THE HATCH.

THE SOYUZ IS SEALED OFF.

She closes a second hatch, and the Soyuz is safe.

She exhales in RELIEF.

A RUMBLE in the Station makes the Soyuz quake.

The extinguisher is blocking her path to the hatch and Ryan has to push it into the cabin as she darts toward the-

SOYUZ. CONTROL CABIN.

As soon as she makes it through the hatch, she TURNS the CABIN LIGHTS ON.

There is just enough space for three astronauts to sit surrounded by the CONTROL PANEL that navigates the vessel.

She sits down in the command chair.

She fastens the safety belt, and looks around, trying to recognize the different buttons on the panel, which are all labeled in Russian.

RYAN

OK... where was it?... where was it?

She moves her finger across the different buttons, searching.

RYAN (CONT'D)
Where is the power?... Here you are.

Her finger stops on a button, which is labeled- BKN

She presses on it and the CONTROL PANEL turns ON. All the buttons light up and with a hum, the Soyuz's systems start to run.

RYAN (CONT'D)
Good... good... just like training...

Ryan reaches to the right, where next to the panel, there are several binders, each a different color.

RYAN (CONT'D)
Undocking... undocking... Yes...
red...

And she takes out a RED BINDER.

It's all written in Cyrillic. She turns the pages until she sees a GRAPHIC representing the UNDOCKING PROCEDURE.

RYAN (CONT'D)
Ok... Ok... I remember this...
undocking...

She uses the CURSORS on the panel and selects a function on the COMPUTER SCREEN.

She presses another button and-

On the SCREEN, a COUNTDOWN- 4:30... 4:29... 4:28...

Another RUMBLE in the Station.

RYAN (CONT'D)
We don't have four minutes to spare.
We're going manual...

She flips through the binder to another page. She looks at a diagram and uses the cursors on the panel to change the function on the screen-

RYAN (CONT'D)
Okay. Arming the system...

She releases the SAFETY LOCK on a BUTTON.

AN EXPLOSION in the Station makes everything shake. The vibration passes through her body, startling her, and-

RYAN (CONT'D)
Firing the pyros...

SHE PRESSES the BUTTON.

RYAN (CONT'D)
Rezerv rasstyk!

The SOUND of a mechanism releasing reverberates throughout the vessel.

OUTER SPACE. INTERNATIONAL SPACE STATION. 500 KM ABOVE EARTH.

SILENCE.

A SPRING MECHANISM pushes the Soyuz away from the Station.

SLOWLY.

VERY SLOWLY.

The Spacecraft is made out of three modules- the ENGINE, the CONTROL CABIN, and the AIRLOCK at the front.

SOYUZ. CONTROL CABIN.

Detached from the Space Station, the rumbling has ceased, leaving only the gentle hum of the cabin.

ON THE PERISCOPE-

The distance between the Soyuz and the Docking Module grows little by little as the vessel drifts away from it.

Ryan sits tensely and checks the manual and-

She presses different buttons, bringing to life a new set of systems.

RYAN
I engaged manual control- R O A K and
RYD are activated.

She grabs the joysticks with her hand, and-

OUTER SPACE. 500 KM ABOVE THE EARTH.

The lateral thrusters give a small thrust, and as the spacecraft moves away from the Station it drags its parachute, which floats lifelessly in space.

ANOTHER BIGGER THRUST, and as the Soyuz pulls away from the Station, the parachute's ropes tense, and-

A BIG JOLT.

SOYUZ. CONTROL CABIN.

Her seat belts prevent her from being projected forward as the Soyuz is pulled to a sudden stop.

Ryan is very confused, unaware of the reason for the sudden stop. She looks at-

THE PERISCOPE-

The Station is drifting out of the scope's sight.

She turns to-

THE PORTHOLE-

And through the glass she sees that-

The Station is coming straight at her and it looks as though-

THEY'RE ABOUT TO COLLIDE.

RYAN

Oh, no. No, no, no.

She presses the joystick.

OUTER SPACE. 500 KM ABOVE THE EARTH.

The Soyuz is two meters away from the Station, about to crash, when-

The SOFT JETS ignite, launching the vessel upwards.

The Soyuz skims just over the Docking Module and passes three inches away from the solar panels, barely avoiding a collision with the metal giant.

And as the Soyuz drifts upwards, the Station passes under it.

SOYUZ. CONTROL CABIN.

Now Ryan can see through-

THE PORTHOLE-

The parachute is tangled with a solar panel and the ropes are tensing up, and-

SHE'S SHAKEN BY A NEW PULL.

OUTER SPACE. 500 KM ABOVE THE EARTH.

The Soyuz stabilizes over the Station, the parachute entwined with the solar panel.

SOYUZ. CONTROL CABIN.

She looks out at-

THE PORTHOLE-

The rope extends from the cabin to the parachute tangled with the Station.

RYAN

Great. Fantastic. Perfect.

OUTER SPACE. 500 KM ABOVE THE EARTH.

SILENCE

The Station hovers below the Soyuz like a large whale swimming beneath a tiny lifeboat.

The HATCH of the Soyuz OPENS.

Ryan comes out of the craft into space. She's wearing the space suit she packed and she carries a large bag.

She holds onto handles as she floats, SAFELY TETHERED to the inside of the cabin.

She LOOKS around-

The International Space Station is a looming presence floating ten meters below. It is pulling the Soyuz by its parachute.

An ALARM on her STOPWATCH RINGS. It's been 85 MINUTES.

She turns the alarm off and looks around.

RYAN

Clear skies but with a chance of satellite debris.

SHE HUMS A SONG, the tune is reminiscent of the Hank Williams Melody that Matt had played earlier.

She begins to climb around the vessel. With plenty of oxygen in her pressurized suit, this is not a difficult task.

She pulls herself from handle to handle, making her way around the Soyuz and reaching-

THE PARACHUTE CONTAINER-

An impact has blown open the cover. Three ropes float out of the container into space. Three meters away from the vessel each rope branches into dozens of parachute strings. Next to it-

A second cover is also badly damaged.

Harnessing herself to a handle, she inspects the ropes. The three ropes are bolted to the container's frame.

RYAN (CONT'D)

Okay. We detach this and we go home.
Piece of cake.

She harnesses the bag and RESUMES her HUMMING, louder this time.

She unzips the bag and takes out the PISTOL GRIP tool, without noticing that behind her-

DOZENS OF PIECES OF DEBRIS pass, zooming less than thirty meters away from the Station.

A tiny piece of high-speed debris crashes against one of the Station's Solar panels, shattering it and causing the Station to tremble.

She places the tool against the FIRST BOLT, stretching her arm into the parachute container. It is an awkward position.

She pulls the trigger and the drill rotates, turning the bolt, but it slides out of the notch.

She places the tool once more against the bolt and pulls the trigger. The drill rotates, SLOWER this time.

She HUMS under her breath and SWEAT begins to drop down her forehead.

She is very focused, unaware that behind her-

DEBRIS HITS THE STATION'S SOLAR PANEL, piercing holes through it.

THE BOLT COMES OFF.

As it FLOATS OFF into space, Ryan drops the PISTOL GRIP and uses both hands to detach the rope from the frame.

The ROPE FLOATS away from the Soyuz, undulating like a long snake, but-

Ryan notices that the Pistol Grip is also floating away.

She stretches her arm trying to catch it, but it is out of her reach.

She pushes herself towards the pistol grip, and barely manages to grab onto it when she sees-

RYAN (CONT'D)

Oh shit.

THE TIDE OF DEBRIS is floating STRAIGHT AT HER.

She pulls herself back to the container.

DEBRIS HITS THE STATION.

It CRASHES in SILENCE against one of its modules, creating a hole the size of a car wheel. The vacuum sucks BLUE FLAMES from the station that quickly die without oxygen to consume.

Ryan brings the pistol-grip to the SECOND BOLT and pulls the trigger. The bolt spins.

Ryan is HUMMING louder and louder.

Ryan stares intently at the head of the bolt turning as the debris zooms by behind her.

THE SECOND BOLT COMES OFF.

She quickly pulls the rope loose from the frame and lets it float away.

Shaken by the impacts, the Space Station drags the Soyuz with it.

She braces herself as-

DEBRIS WREAKS HAVOC- some pieces hit the Station, others crash against one another. Each collision creates more debris that ricochet and fly away in all directions.

The Soyuz is pulled by the remaining parachute rope, as the Station spins out of control.

Ryan starts humming even louder, the bravado is full tilt now.

Her face is now covered in sweat, which pours into her eyes, making it difficult to see as she unscrews the last bolt.

Behind her, a cluster of debris PIERCES THE PARACHUTE.

Ryan continues drilling as-

MORE DEBRIS HIT THE STATION.

It CRASHES against the Japanese Lab, which silently EXPLODES into millions of pieces. The pieces expand away from the Station.

THE LAST BOLT COMES OFF.

Ryan manages to unhook the rope, freeing the Soyuz from the collapsing Space Station.

She braces herself against the vessel, as she sees-

RYAN (CONT'D)

Shit!

The Soyuz is heading straight towards the Station's Solar Panels.

RYAN (CONT'D)

No... no... no..

The Soyuz' Solar Panel collides with the Station's, shattering into smaller pieces of debris that almost hit Ryan.

The Soyuz spins away as-

MORE DEBRIS HITS THE STATION.

Ryan watches as a succession of satellite fragments pepper the slowly revolving Station segments. As the segments crumble, colliding with additional debris, the fragments glimmer magnificently then join...

...the THINNING TIDE OF DEBRIS orbiting toward the dark side of the Earth. All of a sudden...

EVERYTHING IS CALM.

She pauses, blinking into the suddenly empty distance. Her gaze remains fixed on the vast nothingness--for no good reason--but nevertheless FIXED on *something*.

RYAN (CONT'D)

I hate space.

SOYUZ SPACECRAFT. CONTROL CABIN.

A SYMPHONY OF ALARMS shrieks loudly. The hatch FLIES open and a helmet floats in, followed quickly by Ryan.

RYAN

Shut up!

She presses different buttons, and with each a voice of the alarm symphony dies until they are completely silent.

RYAN (CONT'D)

Ok.

She takes a breath and begins fastening the seat belt.

RYAN (CONT'D)

Alright. That's good.

She puts on the communication headset and-

Resets the STOPWATCH- 85 minutes and counting down.

She checks the TEMPERATURE GAUGE-

She exhales, the plume of her hot breath hanging briefly in the frigid cabin air before evaporating.

RYAN (CONT'D)

Okay, let's stabilise you.

She takes the JOYSTICK.

Ryan looks focused at-

THE PERISCOPE-

Where the western horizon comes into frame and nears the center crosshair.

A small dot GLIMMERS in the distance- THE CHINESE STATION.

RYAN (CONT'D)

Ok. Let's visit the Chinese station.
Houston in the blind, Tiangong is
approximately 100km.. to the west and I
am off it's course by about 3 degrees.
I will correct trajectory.

She moves the Joystick, and the crosshair readjusts.

RYAN (CONT'D)

Ok.

She releases the safety lock and places her finger on the button.

RYAN (CONT'D)
Ok. I'll engage main thrust in five...
four... three

She releases the safety lock.

RYAN (CONT'D)
two... one...

She pushes on the button.

OUTER SPACE. 300 KM ABOVE EARTH.

The Soyuz floats with its nose directed towards a bright star on the horizon, the Chinese Station, but-

Nothing, not even a small flame, comes out of its back thrusters.

CONTROL CABIN.

Ryan waits, expectantly, and gives the button a NEW PUSH, but-

RYAN
One...

Nothing. The thruster won't ignite.

RYAN (CONT'D)
One... one...

OUTER SPACE. 300 KM ABOVE EARTH.

The vessel remains motionless, orbiting over the Pacific which is already under night's dark veil.

CONTROL CABIN.

She pushes again, and again, and again-

RYAN
Come on. Come on!

OUTER SPACE. 300 KM ABOVE EARTH.

But NOTHING.

The Soyuz stays in place.

CONTROL CABIN.

Ryan looks at the FUEL GAUGE- 30 percent.

She taps on it and the frozen needle drops to EMPTY.

RYAN
You gotta be kidding me.

She taps on the frozen dial once more, as if trying to get the needle to go back up, and once again-

RYAN (CONT'D)
Where's your backup?

She taps even harder this time.

RYAN (CONT'D)
Where's your goddamn backup?!

She bangs down on the control panel in frustration--

RYAN (CONT'D)
Fu--

OUTER SPACE. 300 KM ABOVE EARTH.

Inside the capsule, through the portal, Ryan hits and hits, bouncing around the confined space of the cabin and venting all her anger, until she herself is out of fuel.

She grabs the radio and-

RYAN
This is Dr Ryan Stone, can you hear me? Houston, this is Ryan Stone, can you hear me? Copy? Houston, this is Ryan Stone, can you hear me? Copy?

THE SUN SETS.

A magical cosmic act. As the sun nears the edge of the Earth, the atmosphere brightens, shining with a luminous orange light that is reflected off the surface of the Pacific Ocean.

At the Soyuz's orbiting speed this does not last long. The sun quickly dips behind the edge of the Earth and the whole face of the planet is in shadow.

The vessel is almost lost in the deep black of night. Fluorescent green light pours out of the porthole, like a lonely firefly lost in the deep of night.

CONTROL CABIN.

And the night has brought with it its cold grip.

Ryan shivers and her voice is now weak, but she continues searching for help-

RYAN

Houston, this is Ryan Stone, can you hear me? Copy? Houston, this is Ryan Stone, can you hear me? Copy?

She turns her neck stiffly, looks at the-

TEMPERATURE DIAL, -8 degrees and dropping. Through the PORTHOLE the SUN drops. DARKNESS descends.

Finally, a SOUND SURFACES through the static:

A CRACKLING.

The CRACKLING SOUND is coming from the communication headset. Ryan puts it on and brings the mouthpiece to her lips.

RYAN (CONT'D)

Houston. Houston! This is Mission Specialist Ryan Stone. Do you copy!

This glimmer of hope gives her a new burst of energy.

She TURNS ON THE CABIN LIGHT and attempts to tune into the frequency, turning one of the control panel's dials. She frowns.

RYAN (CONT'D)

(into the mouthpiece)

Houston, you're coming in over the AM frequency. Please confirm identity.

Fragmented words emerge through the static.

TRANSMISSION

Han... ni... ts...

She turns the dial slowly, clinging desperately to the wavering thread of communication.

RYAN
Repeat. This is Mission Specialist
Ryan Stone from STS-157. Do you copy?

Words BURST FORTH, ringing clear as a bell for a moment.

TRANSMISSION
Hannik ya itc... pini.

Ryan blinks. The transmission is not in English.

RYAN
Is this the Chinese Station? Is this
Tiangong? Copy?

As she tunes in a faint voice is distinguished. It doesn't
appear to be in Chinese either.

RYAN (CONT'D)
Do you speak English?

TRANSMISSION
Hannic ya itcitem pini!

RYAN
S.O.S. Do you understand?

TRANSMISSION
Uumarug taigaa!

RYAN
Mayday! Can you copy? Mayday! Mayday!

The voice on the transmission appears to be a man in a very
jovial mood. He keeps laughing.

TRANSMISSION
Mayday!

RYAN
Yes! Mayday! Mayday!

TRANSMISSION
Mayday! Aningang!

RYAN
Aningang?

TRANSMISSION
Mayday, Aningang! Aningang, Mayday!

The HOARSE LAUGHING of an MAN rises through the STATIC.

RYAN
(to herself)
Aningang...?
(then, realizing:)
Is that your name? Aningang is your
name?!

TRANSMISSION
Aningang! Mayday! Suli, suli!

She starts to speak again but the glimmer of hope fades from her face with the realization that this man does not understand her plea.

RYAN
No, Mayday's not my name. I'm Stone,
Dr. Ryan Stone-- I need help.

TRANSMISSION
Mayday! Ieukpalliktuq uumarug taigaa
naabuqtuq.

A noise in the background makes Ryan smile.

RYAN
(softly)
Dogs...
(into headset)
Are those dogs? Those are dogs! Are
you calling from Earth?!

The barking of several dogs can be heard behind the man's voice. She GRINS.

She listens to the man's laughing voice, shakes her head helplessly and sighs.

RYAN (CONT'D)
Where are you, Aningang? Is the sun
out? Are there birds? Are there trees?
Can you smell the ocean?

TRANSMISSION
Ieukpalliktuq naabuqtuq.

RYAN
Is it beautiful where you are? Here
it's colder than hell and lonelier
than shit, but it's beautiful
Aningang. Utterly, terrifyingly
beautiful.

Through THE PORTHOLE-

Even under the darkness of night, it is possible to see the glaciers spreading over the green forests. It all looks so fresh and full of life.

RYAN (CONT'D)

Make your dogs bark again, Aningang.
Will you? Please...

TRANSMISSION

Suli aasrivak aatqatik niuruq...?

RYAN

Dogs! Woof. Woof. Woof.

She makes barking noises. The man begins to laugh and barks back at her.

TRANSMISSION

Auuu. Auuu. Oipmiq. Oipmiq! Auuu.
Auuu.

Ryan and Aningang bark in unison.

RYAN

Woof. Woof.

TRANSMISSION

Auuu... Auuu...

RYAN AND TRANSMISSION

Auuu. Auuu. Woof. Woof.

Ryan begins to HOWL, giving in to the mad joy of it all. Moments later, through the RADIO, she is joined by a CHORUS of CANINES--Aningang's DOGS--TUNING INTO HER VOICE in a mad, crazy harmonic cacophony. Ryan smiles, blissfully happy, howling with abandon.

Each howling reaches deeper and is more cathartic, unlocking emotions that have been festering over time, and-

TEARS ROLL FROM HER EYES, clear as crystals, spilling from her lashes and floating INTO THE AIR, glimmering LIKE SAPPHIRES in the cool moonlight.

They float away, like tiny satellites orbiting her face.

Aningang can be heard intermittently, YELLING, as if trying to silence the dogs. Then the dogs, one by one, cease their wailing and Ryan is left with nothing but her own voice.

She stops, gazing at her tears suspended in the gloomy blue light.

RYAN
I'm going to die, Aningang.

The SIGNAL ebbs, losing its battle with the STATIC.

RYAN (CONT'D)
I mean, we're all going to die.
Everyone knows that. But I'm going to
die today...

The STATIC waffles in and out.

RYAN (CONT'D)
Funny that. To know.

The STATIC breaks and Aningang's HUSKY VOICE begins SINGING.

RYAN (CONT'D)
And you know what Aningang... I don't
care. I don't care if I die. I don't
have anything... not anymore.

Ryan is floating now over her seat.

RYAN (CONT'D)
But the thing is... I'm still scared.
I'm really scared...

She rolls in space and stares upwards...

RYAN (CONT'D)
No one will mourn me. No one will pray
for my soul. Will you mourn me,
Aningang? Is it too late to say a
prayer? I'd say one for myself, but I
have never prayed in my life... no one
ever taught me how...

The tune is lyrical and soothing, tinged with a touch of
melancholy.

RYAN (CONT'D)
No one ever taught me how...

Ryan listens to Aningang's melody and smiles softly, closing her
eyes.

Ryan's face grows slack as she drifts toward unconsciousness,
buoyed along on Aningang's sad soulful song. Then...

...a SPUTTERING CRY cuts through the static.

A BABY.

Ryan's eyes pop open.

RYAN (CONT'D)
A baby. There's a baby with you.

A beat. Aningang stops singing, speaking in a soft voice:

TRANSMISSION
Ieukpalliktuq upatimi...

RYAN
You are singing to your baby? Is that
a lullaby? That's so sweet!

Ryan is transfixed, listening to the gentle gurgle of the baby as Aningang coos to it, then begins to SING again.

RYAN (CONT'D)
I used to sing to my baby too.

Painful memories flash before her, haunting her. Ryan's lump in her throat is washed away by a gentle sob.

RYAN (CONT'D)
I hope I see her soon.

She reaches for a valve and opens it.

A HIZZING sound is heard inside the vessel, and-

ON THE SCREEN-

The Oxygen in the cabin's atmosphere begins to drop.

SHE TURNS OFF THE LIGHT.

Ryan closes her eyes, simply listening to the lullaby as it grows fainter...

RYAN (CONT'D)
(growing ever drowsier)
That's nice. Keep singing, Aningang,
just like that. Sing me to sleep. I'll
sleep and sleep and sleep. Sing to me,
Aningang... sing...sing....

The transmission grows fainter...

...and fainter...

...and then is...

...gone.

For a long beat Ryan merely sits there. She is gently humming a tune.

It is a LULLABY.

SHE SURRENDERS.

SHE WEEPS.

A quiet deep sorrow that silently grows in intensity and that finally explodes into-

A SOFT WAIL.

TEARS float around her like tiny satellites.

The cold and the gentle humming of the Soyuz cradles Ryan.

She closes her eyes, and as her breathing relaxes she begins to fall asleep, until-

CLICK CLICK CLICK.

Ryan opens her eyes, startled.

CLICK CLICK CLICK.

Ryan turns in confusion and looks at-

THE PORTHOLE-

THROUGH THE GLASS, the helmet of an astronaut is looking in.

IT IS MATT.

He knocks once more, this time louder.

CLICK CLICK CLICK.

Ryan is still drowsy and does not understand what is going on, when she sees that-

The latch on the porthole begins to move.

RYAN (CONT'D)

No... no.. don't.

But the latch continues to open.

Ryan immediately straps herself to the commander chair.

The latch keeps turning.

Ryan covers her eyes and face with her hands when-

THE LATCH RELEASES and

THE HATCH SWINGS OPEN.

The VACUUM of space sucks in one sharp gust all the air inside the cabin and with it every sound.

The straps hold Ryan back as objects gush out through the hatch. Her hands press tightly covering her face.

On the Control Panel alarms begin to flash.

A SHADOWY FIGURE makes its way in and with one sharp motion-

Turns and closes the hatch. Presses a green button and-

The cabin begins to pressurize.

And sound re-emerges with the beeping of the alarms as-

The red-orange-green graph on the control panel show the atmospheric levels reaching green.

Ryan uncovers her face and stares from the shadows at the figure, who straps into the seat next to her. He unlocks the ring around his collar and-

TAKES OFF HIS HELMET.

COUNTRY WESTERN MUSIC escapes into the cabin.

MATT

Ahhhh! Alright, check your watch. 13 hours, 11 minutes. Call Anatoly, tell him he's been bumped.

The figure glances around.

MATT (CONT'D)

Bit gloomy in here. How 'bout a little light?

He taps a few buttons on the console and a face blooms:

Matt.

Ryan stares, mouth agape.

RYAN

How did you?

MATT

Trust me, it's a hell of a story.

RYAN
But how did you?

He reaches out and effortlessly flicks a myriad array of switches. Instantly, the alarms go silent.

MATT
That's better.

RYAN
How?

Ryan looks at him wide eyed, wanting to know how-

MATT
I found a little extra battery power.
I'm just happy you're still alive. To
be honest, I thought your chances were
slim to none. By the way, did you find
the vodka?

RYAN
You never told me where.

Matt fishes a SMALL FLASK from under his seat, spins off the cap...

MATT
Oh well... To Anatoly! Na zdorovje.

...and takes a big gulp. He offers the flask to Ryan, who appears to be dozing off. She blinks, shakes her head.

RYAN
No.

He studies her.

MATT
No? Right, let's get out of here.

He looks at the monitors, where the Chinese Station is seen.

MATT (CONT'D)
We're 'bout a hundred miles to the
Chinese Station. A little Sunday
drive.

RYAN
We can't.

MATT
Course we can.

RYAN

There's no fuel. I tried everything.

MATT

Well, there's always something we can do.

RYAN

I tried everything.

MATT

Did you try the soft landing jets?

RYAN

They're for landing so.

MATT

Well landing is launching it's the same thing, didn't you learn about that in training?

RYAN

I never got to land the simulator, I told you.

MATT

But you know about it.

RYAN

And I crashed it every time.

Ryan is falling asleep. Matt studies her as she dozes off.

MATT

Listen you want to go back or do you want to stay here? I get it, it's nice up here, you can just shut down all the systems turn out all the lights, and just close your eyes and tune out everybody.

Matt starts flipping through buttons on the console, turning the cabin lights off.

MATT (CONT'D)

There's nobody up here who can hurt you, it's safe. Then what's the point in going on, what's the point of living?

When the cabin is in darkness, he turns and looks at Ryan.

MATT (CONT'D)

Your kid died, doesn't get any rougher than that, but still it's a matter of what you do now. If you decide to go that you've gotta just get on with it, sit back enjoy the ride. You have to start living life, Ryan.

Ryan is having trouble keeping her eyes open.

RYAN

How did you get here?

MATT

Ryan, you have to learn to let go ... Hey?

Ryan is almost sound asleep.

RYAN

What?

Ryan is asleep.

MATT

It's time to go home.

Her eyes snap open.

Her gaze shifts. The flask is floating in front of her. But no Matt. She turns. THE CABIN IS EMPTY. She turns back.

CLICK CLICK CLICK.

Ryan notices that the gate of the ventilation duct is shaking, making a percussive sound.

A SOFT COOL LIGHT shines in through the condensation that has frozen on the glass. It is-

THE MOONLIGHT caressing Ryan's face.

RYAN

Landing, landing. Landing is launching.

With a new surge of determination she TURNS ON THE CABIN LIGHT.

She pulls the HELMET floating above her and puts it on.

She connects the umbilical to her suit, opens the Oxygen Valve, and begins to breath.

As the Oxygen flows back into her brain a new surge of determination brightens her face.

She opens the valves of the other two umbilicals, allowing Oxygen to flow, pressurizing the cabin.

She grabs the MANUAL.

RYAN (CONT'D)
Okay, landing, landing, landing is green.

She opens the green binder and browses through its index.

RYAN (CONT'D)
Okay, okay landing, alright.

She stops, turns some pages and stares closely at the manual.

Ryan notices the Energy Bar floating by her. She grabs it and as she opens the wrapper, she stares intently at one page of the MANUAL, where there is-

A DIAGRAM-

An ILLUSTRATION of the Soyuz Capsule two meters before landing and hitting the ground. A thrust is shooting out from under its bottom, cushioning its fall: THE SOFT LANDING ENGINES.

RYAN (CONT'D)
Soft landing jets trigger automatically at three meters before landing. ... you're a clever son of a bitch Matt. So to land I need to get rid of the BO and Engine module, okay?

She puts on the communication headset.

RYAN (CONT'D)
Listen to me Matt. You're going to see a girl with brown hair. She's Sarah, her hair is probably a mess. That's okay, she doesn't like to brush it.

She looks out of the porthole, down at Earth.

RYAN (CONT'D)
Tell her mommy found her red shoe. She was so upset about that shoe Matt, but tell her it was right under the bed.

She turns back to the console and places her finger over one of the buttons.

RYAN (CONT'D)

You give her a big hug and a kiss for me and tell her mamma misses her. Tell her she's my little angel and that she makes me so proud, so so so proud, and that I promise I'll try and make her proud too. You tell her that I'm not quitting, that I'm going to keep fighting. You tell her I love her Matt... I love her so much.

Ryan smiles, remembering... and then-

RYAN (CONT'D)

Tri module separation, go...

She presses the button.

OUTER SPACE.

The locks connecting the three modules of the Soyuz release.

CONTROL CABIN, AIRLOCK, and the ENGINES SEPARATE.

A mechanism pushes the CONTROL CABIN away from the AIRLOCK and the ENGINES, and it slowly gains distance from them.

CONTROL CABIN.

Ryan scans through the complicated charts and diagrams in the manual.

RYAN

Okay Houston, here comes the tricky part, the Soyuz has to think we're only three meters above the earth.

A pause, and then-

RYAN (CONT'D)

Let's reset you then.

Using the manual as a reference, Ryan uses the cursors to select the ALTITUDE DISPLAY on the computer screen.

The current ALTITUDE is- 2600 M.

She uses the cursors and presses a button. A WARNING on the computer screen comes on.

She presses another button, and-

ON THE SCREEN, the ALTITUDE goes blank.

Ryan punches a new set of commands.

The ALTITUDE now reads- 3 meters.

RYAN (CONT'D)

Okay. I only have one shot at this.
One shot...

She extends her finger...

RYAN(CONT'D)

What's the point if we don't try?

SHE PRESSES THE BUTTON.

OUTER SPACE.

A THREE SECOND THRUST ignites at the back of the cabin, pushing it at great speeds toward the Chinese Station.

SOYUZ CONTROL CABIN.

The strength of the thrust pushes Ryan back in her seat.

She looks at-

THE PERISCOPE-

The Soyuz is approaching the Tiangong. The center of the crosshair is aiming three degrees above the Chinese Station.

OUTER SPACE.

The Soyuz is making its way rapidly towards the Chinese Station.

CONTROL CABIN.

Ryan is looking out of the window, at Earth-

RYAN

Wow... you were right Matt... it's
magnificent...

She then turns to-

THE PERISCOPE-

The Chinese Station quickly grows in size as the Soyuz gets closer and closer.

ALTITUDE DIAL- 155 km and dropping.

RYAN (CONT'D)

You're losing altitude, Tiangong. You keep dropping and you're going to kiss the atmosphere. But not before I get to you. You have my last ride home.

A new sense of urgency comes up on Ryan's face.

She unhooks the umbilical from her suit.

She unstraps herself.

She floats over and looks out of-

THE PORTHOLE-

The Chinese Station is approaching, getting closer.

She disarms the emergency exit and holds on to the LATCH.

She pauses and turns to grab the fire extinguisher and holds it tightly against her chest with one arm. With the other arm-

She reaches for the Latch.

The Station is hovering right next to her and the cabin is going to pass it.

RYAN (CONT'D)

Okay, I'm done with just driving.
Let's get go home.

She turns the latch, and-

PYROTECHNICS shoot the porthole into space.

The brutal force of the infinite VACUUM of space SUCKS THE AIR out of the cabin, and-

Ryan is LAUNCHED out of the cabin at a tremendous speed.

SHE HITS HER SHOULDER as she goes through the hatch into-

OUTER SPACE.

A CANNONBALL WOMAN is launched up from the Soyuz's hatch. She passes the Chinese Station as she twirls up toward the Heavens.

The Soyuz continues its straight trajectory toward Earth.

INSIDE THE HELMET-

Ryan is stunned from the impact and her shoulder is in pain.
Outside-

Everything twirls.

Earth and Heavens.

An ALARM in her STOPWATCH RINGS. It's been EIGHTY-FIVE MINUTES.

And she spins and sees-

THE TIANGONG, one mile below her. And below it-

A bright comet leaves behind a yellow scratch over the Earth. It is-

THE SOYUZ BURNING upon contact with the atmosphere.

Ryan drifts away. She holds tightly to the fire extinguisher with one hand, and with the other she checks her right shoulder.

IT HURTS.

But there's no time, the Tiangong is getting farther away. She points the nozzle of the fire extinguisher away from her and triggers a-

SPRAY-

It acts like a thrust that pushes her toward the Station. It helped, but she is still off target.

INSIDE THE HELMET-

She is in pain.

The glass visor is steaming up.

She begins HUMMING as she looks at-

The Station drifting ahead, less than five hundred meters away.

From this distance the damage caused to the Tiangong by the debris is clear. The solar panels are shredded to pieces, and several modules appear to have been badly hit.

Ryan gives-

ANOTHER SPRAY-

Propelling herself even closer to the Station.

INSIDE THE HELMET-

She stops humming. Her breath is fogging up the glass, giving her a blurred view of-

The Station, which is less than a hundred meters away. She can see that-

The LIFEBOAT, the SHENZHOU, a vessel very similar to the Soyuz, is docked on a module.

It's now clear that she's not flying straight toward the Station.

Ryan attempts to correct her trajectory by giving-

ANOTHER SPRAY-

But only a very SMALL THRUST comes out of the extinguisher, not enough to push her on the right track.

She PULLS the trigger again-

But only a few dust particles come out. The extinguisher is empty. She lets go of it and it floats away.

She drifts toward the Station, SLOWLY.

She is less than twenty meters away, and getting closer.

AND CLOSER.

And she misses it by a hair.

She drifts, very slowly, two meters above the Station.

Her arm, outstretched, tries to grab hold of anything it can.

INSIDE THE HELMET-

Ryan winces in pain and looks at-

Her outstretched arm reaching toward-

THE STATION-

She slowly drifts across the modules, the tips of her fingers almost touching the surface of the Tiangong.

A handle passes under her, almost within reach, but she does not manage to hold onto it.

INSIDE THE HELMET-

She's struggling, but she knows she's not going to make it. She looks ahead at-

THE STATION-

A solar panel, following the rotation of the Station, comes into view.

She stretches out her arm as she gets closer to it.

But the solar panel continues its rotation and she is approaching very slowly.

The panel is rotating away.

She STRETCHES, and-

She GRABS onto a rod on the Solar Panel, STOPPING her momentum.

Ryan hangs from the Station. She holds her right arm tightly to her chest.

INSIDE THE HELMET-

She catches her breath and is clearly in pain.

Ryan sees-

A LONESOME PIECE OF DEBRIS.

It hovers above the Station and glows as the sunlight hits its surface. It passes very quickly.

And there's ANOTHER ONE cruising farther above.

She pulls her right arm up.

RYAN

Ahhhhhh!

The pain is excruciating, but she grabs onto the panel's rod, and-

SHE PULLS HERSELF UP, and clinging with her leg, she secures herself to the panel.

INSIDE THE HELMET-

She's panting, and through the fogged up glass she can see, far away over the horizon-

BRIGHT DOTS.

Pieces of debris burn as they hit the atmosphere. A swarm of incandescent locusts that-

Is coming directly at her.

Ignoring her pain but using her right arm as little as possible, she climbs up to-

THE BODY OF THE STATION.

She goes over the module and makes her way across, pulling herself from handle to handle.

When she reaches the end of it, with one last BIG PULL she makes it to the-

HATCH that leads into the airlock.

With her bad arm she holds onto a handle.

With the other, she pulls on the latch and-

OPENS THE AIRLOCK.

A gust of AIR bursts out, pushing the hatch wide open.

Ryan holds on tightly to the handle.

ABOVE HER-

Clusters of DEBRIS pass by, flying at different distances and at great speeds.

Pieces COLLIDE with each other, exploding into more debris.

A BIG PIECE OF DEBRIS is flying downward, missing the Station by ten meters as it continues its descent. And-

250 meters below, it BURNS like a shooting star.

The Station is rapidly approaching Earth's atmosphere.

And over the Eastern horizon-

A CLOUD OF DUST is quickly approaching.

THE TIDE OF DEBRIS.

TIANGONG. AIRLOCK. 150 KM ABOVE THE EARTH.

Ryan secures the hatch.

The airlock is smaller than the one in the International Space Station but, like the ISS, there is a small control panel on one side.

INSIDE THE HELMET-

The glass is almost fogged up. She makes her way to the-

CONTROL PANEL-

The red, yellow, and green graph is bright red. Under it, TWO BUTTONS with Chinese ideograms on them.

侶 and 語

Her finger hesitates as she takes a wild guess.

She presses-

語

A FAINT HISSING SOUND is heard.

THE CABIN PRESSURIZES.

As oxygen fills the space-

SOUND BEGINS TO EMERGE.

Unrecognizable at first is a rhythmic pattern under a syncopated murmur. But as air allows sound to conduct its waves, it becomes clear.

AN ALARM IS GOING OFF.

Over it a recording plays in a LOOP. It is in Mandarin. The VOICE in the recording is urgent. Clearly it is not good news.

LOOP

侶蔓販 澆!

She's in pain and more tired than ever now, and she's punchy.

LOOP (CONT'D)

侶蔓販 澆!

She waits, floating.

INSIDE THE HELMET-

The glass is completely fogged up. Through the condensation, she can only discern a RED LIGHT filtering through.

She waits.

RYAN
Come on. Come on.

And when the RED GLOW turns to ORANGE-

Ryan UNLOCKS her helmet and, using only her left hand, struggles to take it off.

As the helmet floats, bouncing off of the cabin walls, Ryan massages her injured shoulder. She does this gently, as even the smallest pressure inflicts pain.

The orange light is turning green when-

She feels the Station quake fiercely, reverberating through the handle she's holding onto.

THE STATION RUMBLES.

OUTER SPACE.

The Tiangong is plummeting.

The tip of a solar panel is already grazing over the outer layers of the atmosphere, leaving a trail behind it as it parts the gases.

DEBRIS passing under the Station burn up.

TIANGONG NODE 1.

EVERYTHING SHAKES.

Ryan rushes out of the airlock.

A new intensity sparkles in her eyes. Her fearlessness and determination are bordering with madness.

She inspects her surroundings. Through a hatch she sees a long corridor-like cabin that leads to another node. It is the LAB MODULE.

The LOOP keeps on playing.

LOOP
侶蔓販 浇!
汉 駝侶 鯊 蛄!

She enters the hatch into the-

TIANGONG LAB MODULE.

The only light is coming from flickering emergency lights. Objects float in chaos.

Ryan makes her way, dodging the disarray of lab objects-

Scientific instruments: A plant drifting by with its roots exposed, clusters of liquid floating like wobbly spheres, two eggs hovering, one of which is broken.

THE SHAKING INTENSIFIES as-

She reaches the end of the module and goes into the-

TIANGONG NODE 2.

She floats to the center of the node.

There are three open hatches- RIGHT, LEFT, and-

BELOW-

A Docking Module, very similar to the one in the ISS. At the far end of it an open hatch leads into the SHENZHOU ESCAPE POD.

MORE RUMBLING SHAKES THE STATION.

OUTER SPACE.

A SOLAR PANEL, defeated by the friction with the atmosphere, breaks off from the Station and is thrown farther down, where it quickly burns, dissolving into sparks.

The TIDAL WAVE of debris is catching up with the Station, a cloud of metal pieces that sparkle with the sunlight.

BRIGHT STREAKS can be seen as debris burns, scratching through the atmosphere.

TIANGONG NODE 2.

Ryan springs into the-

DOCKING MODULE.

Floating through it and reaching the open hatch at the other end, she tosses the helmet inside the Shenzhou.

A LOUD METALLIC ROAR. The Station is collapsing. She dives through the hatch into the-

SHENZHOU ESCAPE POD. AIRLOCK.

It is almost identical to the Soyuz's airlock.

She does a quick flip and-

CLOSES the outer hatch.

Then she pulls on another latch and-

CLOSES the inner hatch.

The Shenzhou is SEALED OFF from the rest of the Station.

She throws the helmet into the Control Cabin and follows through, into the-

SHENZHOU ESCAPE POD. CONTROL CABIN.

She struggles to turn around in the confined space, and then-

She pulls the hatch CLOSED.

THE CONTROL CABIN IS SEALED.

The Shenzhou is smaller than the Soyuz and has only one seat. In this confined space, the SHAKING of the station is felt even stronger.

She sits, BUCKLES herself in, and looks at the-

CONTROL PANEL.

It has more monitors than the Soyuz's panel, and the main board is arranged differently. All of the buttons are labeled with CHINESE IDEOGRAMS.

AND IT IS SHAKING FIERCELY.

RYAN
Seriously?

Through-

THE PORTHOLE-

A thin bright yellow halo covers the whole window.

OUTER SPACE.

The yellow halo envelops the whole Station as it glides over the outer atmosphere.

FRICTION.

The remaining SOLAR PANEL resists breaking off from the structure, but still goes up in flames, leaving a trail of SPARKS.

SHENZHOU ESCAPE POD.

EVERYTHING IS SHAKING.

RYAN

In the Soyuz the power button is
erm....here!

She passes her finger over the board, trying to make sense of the buttons.

RYAN (CONT'D)

Ah, ok ah undocking,
undocking....eenie, meenie,...

She presses 靠.

An ALARM RINGS, and under the ongoing LOOP, a RECORDING, clearly warning.

RECORDING

晤 侶 鯊 駝 汉

RYAN

Ok. That doesn't sound good....

She glances around frantically, turns it off.

It's shaking very intensely but she's wide-eyed now, clearly close to being beside herself.

RYAN (CONT'D)

Miini... moh...

She tries a BIG BUTTON that says-晤

A NEW ALARM, followed by a NEW RECORDING, also a warning-

And with a horrible accent-

RYAN (CONT'D)

No hablo chino.

She keeps searching for the right button.

RYAN (CONT'D)
Mini... moh...

And she presses a new one.

The LIGHTS on the Control Panel GO ON. The cabin makes a humming sound as SYSTEMS BEGIN TO ACTIVATE.

On the control panel lights go on in patterns reminiscent of the switchboard in the Soyuz.

RYAN (CONT'D)
Okay....okay...

She begins going through the progressions she used on the Soyuz, only quicker this time, jabbing button after button.

RYAN (CONT'D)
Good...good...There. And this should be...

She presses one more button and systems turn to green.

RYAN (CONT'D)
Okay... Houston in the blind...

She raises her voice to be heard over the GROWING RUMBLE.

RYAN (CONT'D)
This is Mission Specialist Ryan Stone reporting from the Shenzhou. I'm about to undock from the Tiangong and I have a bad feeling about this mission.

She presses a new button and the system goes to green. And on the MONITOR a COUNTDOWN appears.

RYAN (CONT'D)
Reminds me of a story, Houston--

She reacts to a bad shake of the cabin.

RYAN (CONT'D)
Okay, you know what, Houston? Never mind the story...

She looks around as the cabin starts shaking even harder.

RYAN (CONT'D)
It's getting hotter in here.

She watches the COUNTDOWN on the MONITOR- 3:59... 3:58...

RYAN (CONT'D)
The way I figure it, there's only two
possible outcomes--

Ryan keeps her eyes fixed on the countdown. Raises her voice to
compete with the rising chaos...

RYAN (CONT'D)
I either make it down in one piece and
I'll have one hell of a story to
tell...

And now the noise and the shake are nearing their peak...

RYAN (CONT'D)
...Or I burn up in the next ten
minutes.

Ryan smiles, flips the safety lid of a button open.

RYAN (CONT'D)
Whichever way it goes, no harm no
foul.

As the cabin RATTLES VIOLENTLY.

RYAN (CONT'D)
Because either way--

She closes her eyes, puts her finger over the button.

RYAN (CONT'D)
It'll be one hell of a ride.

Ryan presses the button.

RYAN (CONT'D)
I'm ready.

OUTER SPACE.

The Station is bouncing over the atmosphere. One end of it is
glowing more brightly and catches FIRE.

The TIDE OF DEBRIS is getting closer. Not far off some pieces
are already burning.

A LARGE PIECE OF DEBRIS has caught on fire and is flying at
great speed and-

COLLIDES WITH THE STATION,

Tearing it into two parts, which are sent twisting in opposite directions. The ESCAPE POD, attached to the DOCK, is spinning towards earth.

SHENZHOU ESCAPE POD.

Ryan is SHAKEN and RATTLED in her seat.

RYAN

Yeehaaa!

GRAVITY is still minimal, but the force of the inertia is rough and it jerks her around. She sees-

A RED LEVER above her, but she can only reach it with her bad hand.

SHE STRETCHES

RYAN (CONT'D)

Ahhhhhhhh!

SHE GRABS THE LEVER-

AND PULLS IT.

OUTER SPACE.

THE LOCKS DISENGAGE-

THE CABIN separates from the rest of the vessel and from the Station. It spins away, plummeting toward the atmosphere.

The two fragments of the Tiangong follow, spinning in a rage of sparks and fire.

SHENZHOU ESCAPE POD.

The spinning is punishing. Ryan is shaken violently. She is also mumbling words to herself that we can't hear. It looks like she rambling.

Some LIGHTS GO OFF.

ATMOSPHERE. 130 KM ABOVE THE EARTH.

The capsule's aerodynamics slow down the spinning, positioning the vessel nose up.

It cuts through the atmosphere at incredible speeds.

Its metal is burning hot.

Smoldering DEBRIS and the fragments of the STATION chase the Shenzhou in its descent.

SHENZHOU ESCAPE POD.

THE PORTHOLE-

A blinding light pours in from outside the window.

The spinning is over, but the cabin vibrates with a loud rumble.

As the G-Force restrains Ryan against her seat, she clenches her face and sweats.

On the ceiling, condensation begins to form.

ATMOSPHERE. 120 KM ABOVE THE EARTH.

The Shenzhou is a ball of fire precipitating from the skies.

It's followed very closely by DEBRIS and the two fragments of the STATION.

The TWO FRAGMENTS COLLIDE and EXPLODE into a ball of fire that breaks into many pieces.

An avalanche of fire cascades towards the Shenzhou, rapidly closing the distance.

SHENZHOU ESCAPE POD.

In THE PORTHOLE-

Outside burning debris is passing by. The gravitational pull keeps Ryan tense in her seat as drops fall on her face. She looks at-

THE CEILING- where condensation is dripping.

ATMOSPHERE. 100 KM ABOVE THE EARTH.

The avalanche is about to swallow the cabin when the burning debris disintegrates before reaching the cooling STRATOSPHERE.

The capsule escapes the inferno as the debris crumbles in a final explosion expelling-

A VERY SMALL PIECE OF DEBRIS that-

SHOOTS towards the Shenzhou and-

SKIMS its surface, tearing one of the outer shields.

SHENZHOU ESCAPE POD.

The impact is felt inside and a panel falls off. A small smoke trail is formed around its wires.

Ryan is restrained against her seat by the gravitational force of the fall and-

EVERYTHING IS SHAKING.

LOWER ATMOSPHERE. 70 KM ABOVE EARTH.

The Shenzhou has left the burning debris behind.

As it touches the lower atmosphere, it immediately COOLS DOWN, dimming its brightness, surrounded by a purple sky.

It FREEFALLS 9.8 meters per second and-

A PARACHUTE RELEASES.

The long fabric comes out and EXPANDS as the air fills the red and white canopy. When it's fully open it SLOWS DOWN the cabin's descent and lets it glide in a diagonal path over the Earth.

SHENZHOU ESCAPE POD.

A BREATH OF RELIEF, as through THE PORTHOLE-

She sees the ropes of the parachute extend out to the large canvas cushioning the fall.

LOWER ATMOSPHERE. 10 KM ABOVE THE EARTH.

A SECOND PARACHUTE expands.

It slows the fall even further, shifting the cabin into a more vertical descent toward the ground that is so close it now seems tangible.

SHENZHOU ESCAPE POD.

Ryan starts COUGHING.

The cabin is quickly filling with SMOKE, and-

The white cloud of smoke overflowing the small space is getting thicker.

LOWER ATMOSPHERE. 1 KM ABOVE THE EARTH.

The Shenzhou drops, hanging from the parachutes, at a speed of thirty kilometers per hour.

It is surrounded by a blue sky. It passes through a layer of clouds.

SHENZHOU ESCAPE POD.

She coughs as the white smoke is becoming unbearable. She's suffocating.

LOWER ATMOSPHERE. 100 METERS ABOVE THE EARTH.

The Shenzhou is rapidly approaching the ground.

It is falling straight toward a lake. Two meters before hitting its surface-

THE LANDING ENGINES IGNITE, giving the downward thrust meant to cushion the landing on a hard surface.

The thrust parts the water, creating a curtain of steam, and the Shenzhou gently falls down-

INTO THE LAKE-

Making a wave that spreads out in a circle.

SHENZHOU ESCAPE POD.

Ryan feels the cabin hit the water. She has landed safely.

But she cannot celebrate because she can't stop coughing. She is asphyxiating in the thick cloud of smoke.

She UNSTRAPS herself and-

Reaches a LEVER at the side of the hatch.

She PULLS THE LEVER.

ON THE LAKE.

With a small controlled explosion, the hatch cover is launched away from the cabin.

Smoke pours out through the open hatch.

SHENZHOU ESCAPE POD.

She begins to unstrap herself when-

WATER POURS IN through the open hatch.

She tries to make her way out, fighting against the strong current that is gushing in, but the flow is too strong and-

IT PUSHES HER BACK IN.

She struggles to force her way through the cascade rapidly filling the cabin, but it is too strong.

THE CABIN IS OVERFLOWING.

The water has reached Ryan's chin when-

She manages to take ONE LAST DEEP BREATH of air before-

WATER COMPLETELY FILLS IT.

UNDERWATER

The metallic capsule, which weighs almost three tons, sinks quickly into the lake. As the ropes of the parachute tense, the long fabric follows the cabin down.

SHENZHOU ESCAPE POD.

Air trapped inside Ryan's suit leaks out through the collar and small bubbles float up.

Ryan fights her way to the hatch, and pulling with her good arm, she swims out.

UNDERWATER.

She pushes herself away from the cabin, swimming away from the pod as-

THE SHENZHOU HITS THE LAKE BOTTOM.

A dark cloud of mud swells up around it.

Ryan struggles to SWIM UP to the surface, but she can only use one arm and the wet suit is DRAGGING HER DOWN.

She strokes rapidly, but she isn't moving up. Instead-

SHE'S GOING DOWN, and

HER FEET SINK INTO THE LAKE BED.

She looks up and sees-

The rays of sunlight breaking through the lake's surface are eclipsed by the parachute, which floats down toward her like a huge jellyfish about to engulf its pray.

THE FROG crosses in front of her, effortlessly swimming on its way to the surface.

Small bubbles of air come out of Ryan's nose as she struggles to open her suit.

She takes off the BOTTOM PART of the suit.

Above her-

THE PARACHUTE IS GETTING CLOSER, a net about to trap her.

She struggles out of the TOP PART of her suit. And squirming out from under it-

She frees herself from the heavy garments and SWIMS UP as-

THE SINKING PARACHUTE traps her foot and begins dragging her down. But with a kick-

SHE SETS HERSELF FREE, and-

SHE SWIMS UP, stroking with her good arm. She is completely out of breath, only the tiniest bubbles rise from her nose.

She is about to lose consciousness, when she sees-

THE FROG swimming ahead of her, sliding smoothly through the water toward the rays of sunlight diffracted by the surface.

Ryan's eyes are closed as she floats up, her body limp. The surface is coming closer and closer.

She reaches the thin boundary between water and air and she come out to the-

SURFACE.

And she takes an enormous breath.

RYAN

AAAHHHHHH!

Almost primal, like the first breath of a newborn child, it burns her lungs but reclaims life.

She only has enough strength to keep her face above water. She FLOATS, catching her breath and taking long gulps of air.

She looks up at-

THE SKY-

Where the clouds move, caressed by air and light. And beyond them-

OUTER SPACE, but-

SHE'S BACK ON EARTH.

She turns around, and-

TAKING A DEEP BREATH-

She SWIMS, breaking through the water and harnessing every last bit of energy in her.

And soon she arrives to the-

SHALLOW EDGE OF THE LAKE

She drags herself from the water, like the first amphibious life form crawling out of the primordial soup onto land.

COLLAPSES ON THE SHORE.

The water laps gently over her, washing in and out around her legs.

SHE LIES with her face against the muddy shore and her eyes closed, recovering her strength.

AND SHE BREATHES.

SHE BREATHES AIR.

And as her breath steadies-

SHE SMILES.

She pushes her face against the ground, enjoying the sense of weight, and-

SHE OPENS HER EYES.

Then she looks at her surroundings, taking in the almost unbearable beauty of the planet Earth.

She's breathing deeply and begins to cough.

It's not a cough, it's a chuckle.

RYAN IS CRACKING UP.

Ecstasy overcomes Ryan and-

Joyful laughter fills her body.

SHE IS ALIVE.

RYAN

Thank you.

She PLANTS HER PALMS against the ground and-

With an effort, she pushes herself up.

SHE FEELS HER WEIGHT, and manages to rise to her hands and knees like a four-legged mammal.

And she STANDS UP.

ONE FOOT FALLS heavily on the ground. It sinks into the mud and then-

ANOTHER FOOT.

Ryan's FEET are solidly planted on the mud.

RYAN (CONT'D)

Ahhhhh!!!

One foot moves forward and lands on more solid ground, unstable, coping with the weight. And then-

The other foot follows as-

SHE BEGINS TO WALK ON PLANET EARTH, laughing.

SHE IS PUNCH DRUNK.

SHE IS FREE.
